American business has recently been under fire, charged with inflated pricing and an inability to compete in the international marketplace. However, the evidence presented in this volume shows that the business community has been unfairly maligned—official measures of inflation and the standard of living have failed to account for progress in the quality of business equipment and consumer goods. Businesses have actually achieved higher productivity at lower prices, and new goods are lighter, faster, more energy efficient, and more reliable than their predecessors. Robert J. Gordon has written the first full-scale work to treat the extent of quality changes over the entire range of durable goods, from autos to aircraft, computers to compressors, from televisions to tractors. He combines and extends existing methods of measurement, drawing data from industry sources, Consumer Reports, and the venerable Sears catalog. Beyond his important finding that the American economy is more sound than officially recognized, Gordon provides a wealth of anecdotes tracing the postwar history of technological progress. Bolstering his argument that improved quality must be accurately measured, Gordon notes, for example, that today's mid-range personal computers outperform the multimillion-dollar mainframes of the 1970s. This remarkable book will be essential reading for economists and those in the business community.

From c. 1100 until c. 1170, Latin prosimetrical texts characterized by dialogue, allegory, and philosophical speculation enjoyed a notable popularity within the cultural ambit of the French cathedral schools. Inspired by Boethiusa (TM) "Consolation of Philosophy," the prosimetrum writers applied his literary techniques to the ethical and anthropological concerns of their own era, producing texts of great artistry in the process. This book investigates the rise of the Boethian impulse in Latin, the innovations of the twelfth-century writers, the difficulties that arose when they attempted to recapture the certainty that characterized the "Consolation," and the survival of aspects of this literary mode in later Latin and vernacular literature.

\* Outboard motor repair for the average guy \* Fix up an old outboard and SAVE \$1000 or more compared to buying a new motor! With a little know-how and a few common tools, you can fix an old motor—bring it back from the dead. Sometimes all it takes is a squirt of WD-40 into the cylinder and a new spark plug. Or a new set of points and condensers—which do not require expert knowledge or black magic to install. Maybe the carburetor needs cleaning and adjusting. You can do it! Max E. Wawrzyniak III is an outboard motor guru. He advises you to find an old motor at a yard sale for \$100 or so (and he tells you exactly which ones to look for), and fix it up—rather than spending \$1500 or more on a new motor. He is a big fan of “cheap power.” Get on the water with money left in your pocket. With a basic understanding of how these motors work, a little logical thinking, and a few hours’ work, you can go boating for a fraction of what everyone else has to pay. Also—for the boater who already owns an outboard motor of any age—this book demystifies these internal-combustion marvels that can bring such frustration if they malfunction. You’ll learn how they work, and the simple things you can do to keep them running forever. What Max teaches are not only money-saving skills, but can also be life-saving, as you will no longer be helpless in the face of engine trouble on the water. His clear instructions and over one hundred color photographs will make anyone into a capable outboard mechanic. INCLUDES: What to Buy, Where to Find It, Tools Needed and Where to Begin, The Ignition System, Carburetors, Water Pump Repairs, Recoil Starters, Fuel Tanks, Propellers, Lower Units, Emergency Shut-Down, Fuel Pump Conversion, Remote Controls: Shift and Throttle, Remote Control: Steering, Tiller Conversion, Trouble-Shooting, and Onboard Spares and Tools. This book has always been very popular and well-used in its print edition. Now it's available as an e-book so you can load it into your phone or tablet and always have this wealth of repair / maintenance information at your fingertips, even when out on your boat.

## **Catalog of Copyright Entries. Third Series**

Over 220,000 entries representing some 56,000 Library of Congress subject headings. Covers all disciplines of science and technology, e.g., engineering, agriculture, and domestic arts. Also contains at least 5000 titles published before 1876. Has many applications in libraries, information centers, and other organizations concerned with scientific and technological literature. Subject index contains main listing of entries. Each entry gives cataloging as prepared by the Library of Congress. Author/title indexes.
