Global security cannot be achieved until people view the world as a global community. Until such time, differences will continue to be perceived as threatening. These perceived “threats” are the primary threat to global security. This volume proposes methods for minimizing the “us versus them” mentality so that we can build a sense of global community.

Current best practices and future trends in ERP issues are documented in a practical how-to guide to enable auditors and risk professionals (both IT and non-IT) to evaluate risks and controls in existing ERP implementations and to facilitate the design and building of better practice controls into system upgrades and enhancements. This is the first in a series of technical and risk management reference guides dealing with the world's three major ERP packages: SAP, Oracle Financials and PeopleSoft. SAP is one of the leading developers of enterprise applications worldwide. Its primary ERP product is SAP R/3. FAQs, audit programs, ICQs, references and tips for the assurance professional regarding SAP's Audit Information System and mySAP.com also are provided, making this publication an invaluable resource in today's environment. How to Create Joint Value Alliances, partnerships, acquisitions, mergers, and joint ventures are no longer the exception in most businesses—they are

part of the core strategy. As managers look to external partners for resources and capabilities, they need a practical roadmap to ensure that these relationships will create value for their firm. They must answer questions like these: Which business combinations do we need? How should we govern them? Will their results justify our investments? Benjamin Gomes-Casseres explains how companies create value by “remixing” resources with other companies. Based on decades of consulting and academic research, Remix Strategy shows how three laws shape the success of any business combination:

- First Law: The combination must have the potential to create more value than the parties could create on their own. Which elements from each business need to be combined to create joint value?
- Second Law: The combination must be designed and managed to realize the joint value. Which partners best fit our strategic goals? How should we manage the integration?
- Third Law: The value earned by the parties must motivate them to contribute to the collaboration. How will we share the joint value created? Will the returns shift over time?

Supported by examples from a wide range of industries and companies, and filled with practical tools for applying the three laws, this book helps managers design and lead a coherent strategy for creating joint value with outside partners.

"This book, part of the Integrating National Economies series, examines the case for international harmonization of financial regulation and supervision. Richard J. Herring and Robert E. Litan analyze three basic questions that arise as financial institutions seek to broaden their global reach: What should be the rights of access to markets in different countries? Whose rules should apply? And, which regulatory bodies should enforce these rules?" "The authors provide a framework for understanding the measures to regulate international financial institutions that countries have agreed on so far. They project potential changes in the international marketplace and the implications of those changes for regulatory policy. They discuss how policymakers should respond and, given the relevant policy constraints, how they are likely to respond. The book concludes with proposals designed to emphasize discipline of financial institutions by the market rather than by regulators."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. The Quest for Global Dominance

Remix Strategy

Globalization has fundamentally changed the game of business. Strategic frameworks developed for the analysis of purely domestic business necessarily fall short in the international business context. Managers and business students require alternative approaches to understand and cope with these far-reaching changes. We must learn to think globally in order to succeed. Global Competitive Strategy shows how we can do this by providing a unique set of strategic tools for international business. Such tools include the 'star analysis' that allows strategy makers to integrate geographic information with market information about the global business environment. Also introduced is the 'global value connection' that shows managers how to account for the gains from trade and the costs of trade. Aimed at MBA students taking courses in international strategy, consultants and practising managers with responsibility for strategic development, this 2007 book offers a comprehensive strategic framework for gaining competitive advantage in the global marketplace.

Anil K. Gupta, Vijay Govindarajan, and Haiyan Wang are among the most distinguished experts in the field of globalization. In *The Quest for Global Dominance* they present the lessons from their twenty-year study of over two hundred corporations. They argue that, in

order for a company to create and maintain its position as a globally dominant player, executives must ensure that their company leads its industry in the following four essential tasks: Identifying market opportunities worldwide and pursuing them by establishing the necessary presence in all key markets Converting global presence into global competitive advantage by identifying and developing the opportunities for value creation that global presence offers Cultivating a global mindset by viewing cultural and geographic diversity as an opportunity, not just a challenge Leveraging the rise of emerging markets especially China and India to transform the company's growth prospects, global cost structure, and pace of innovation

It Portfolio Rationalization

Over the last few years, financial statement scandals, cases of fraud and corruption, data protection violations, and other legal violations have led to numerous liability cases, damages claims, and losses of reputation. As a reaction to these developments, several regulations have been issued: Corporate Governance, the Sarbanes-Oxley Act, IFRS, Basel II and III, Solvency II and BilMoG, to name just a few. In this book, compliance is understood as the process, mapped not only in an internal control system, that is intended to guarantee conformity with legal requirements but also with internal policies and enterprise objectives (in particular, efficiency and profitability). The current literature primarily confines itself to mapping controls in SAP ERP and auditing SAP

systems. Maxim Chuprunov not only addresses this subject but extends the aim of internal controls from legal compliance to include efficiency and profitability and then well beyond, because a basic understanding of the processes involved in IT-supported compliance management processes are not delivered along with the software. Starting with the requirements for compliance (Part I), he not only answers compliance-relevant questions in the form of an audit guide for an SAP ERP system and in the form of risks and control descriptions (Part II), but also shows how to automate the compliance management process based on SAP GRC (Part III). He thus addresses the current need for solutions for implementing an integrated GRC system in an organization, especially focusing on the continuous control monitoring topics. Maxim Chuprunov mainly targets compliance experts, auditors, SAP project managers and consultants responsible for GRC products as readers for his book. They will find indispensable information for their daily work from the first to the last page. In addition, MBA, management information system students as well as senior managers like CIOs and CFOs will find a wealth of valuable information on compliance in the SAP ERP environment, on GRC in general and its implementation in particular.
