INTERNATIONAL BEST SELLING AUTHOR Julia Lyle will have nothing to do with domineering men, no matter how tall, dark, and sexy. But Dom Marcus Cavendish will be satisfied with nothing less than collaring the fiercely independent Julia. Nothing could have shocked her more Julia Lyle is invited to her best friend's wedding and is stunned when Lana kneels to accept her husband's collar. When Julia starts to object, firm, relentless hands land on her shoulders. The man behind her threatens to turn her over his knee if she interrupts. She's outraged, but there's no doubt he's serious. After the ceremony, he offers her a glimpse into her friend's lifestyle, if she's brave enough to accept. Master Marcus Cavendish is everything she doesn't want in a man—dominant, self-assured and arrogant. So why can't she resist him? Telling herself that learning about the lifestyle will make her a better friend, Julia agrees to submit to Master Marcus, but only for the evening. Firm and unrelenting in his handling of her, he introduces her to his tawse and the pleasure/pain of a spanking delivered by a competent Dom. The experience unnerves her, making her question everything she thought she knew about relationships, and his forced orgasms leave her shattered. No doubt the scene seduced her, and that makes her doubly determined to avoid him. She has fought hard for her freedom and vowed only to date nice men, and Master Marcus is anything but safe. Marcus is undeterred. Julia is a natural sub. The way she responded to his touch, his voice, his punishment proved it. Now he has to

convince her to yield to him, submitting to his tawse as she kneels to accept his collar.

Misery's Mathematics

This book reveals the strain of a moment in American cultural history that led

several remarkable writers -- including Emerson, Warner, and Melville -- to render the stark rupture of loss in innovative ways. Pushing Protestant culture's sense of loss into secular terrain, these three key writers rejected Calvinist and sentimental models of bereavement, creating instead the compensations of a mature American literature whose 'originality' stemmed from its capacity to mourn the loss of a common culture and, through such mourning, to assent to new social and cultural realities. Balaam locates this appeal to 'reality' in the analogies antebellum writers drew between their experience of bereavement, and the experiences of uncertainty and disillusionment, that followed the revolutions in science, the winding down of creedal systems and the economic instability typifying the pre-Civil War era.

Through the eyes of an inventor of new markets, *Good Derivatives: A Story of Financial and Environmental Innovation* tells the story of how financial innovation – a concept that is misunderstood and under attack - has been a positive force in the last four decades. If properly designed and regulated, these “good derivatives” can open vast possibilities to address a variety of global problems. Filled with provocative ideas, fascinating stories, and valuable lessons, it will provide both an insightful interpretation of the last forty years in capital and environmental markets and a vision of world finance for the next forty years. As a young economist at the Chicago Board of Trade, Richard Sandor helped create interest rate futures, a development that revolutionized worldwide finance. Later, he pioneered the use of emissions trading to reduce acid rain, one of the most successful environmental programs ever. He will provide unique insights into the process of creating these new financial products. Covering successes and failures, the story describes the tireless process of inventing, educating and creating support for these new inventions in places like Chicago, New York, London, Paris and how it is unfolding today in Mumbai, Shanghai and Beijing. The book will tell the story of the creation of the Chicago Climate Exchange and its affiliated exchanges (European Climate Exchange, Chicago Climate Futures Exchange and Tianjin Climate Exchange, located in China). The lessons learned in these markets can play a critical role in effectively addressing global climate change and other pressing environmental issues. The author argues that market-based trading systems are a far more effective means of reducing pollutants than “command-and-control”. Environmental markets may ultimately help to find solutions to issues such as rainforest destruction, water problems and biodiversity threats. Written in an engaging, narrative style, *Good Derivatives* will be of interest to both practitioners and general readers who want to better understand the creative process of financial innovation. In the middle of so much distrust of markets, it is also a recipe of how transparent, well-regulated markets can be a force for good in the environmental, health, and social areas.

This book proposes a fresh and original interpretation of Keats' use of classical mythology in his verse. Dr Aske argues that classical antiquity appears to Keats as a supreme fiction, authoritative yet disconcerting, and his poems represent hard endeavours to come to terms with the influence of that fiction. The major poems (most notably Endymion, Hyperion, the Ode on a Grecian Urn and Lamia) form a stage, as it were, upon which is played out a psychic drama between the modern poet and his classical muse. The study is especially bold in its assimilation of historical scholarship and literary theory to a close reading of the texts. Individual poems are discussed in the context of late Enlightenment and Romantic attitudes towards antiquity and in the light of recent critical theory, in particular the theory of literary history and influence formulated by Harold Bloom and Geoffrey Hartman. Keats emerges as a significant example of the way in which a poet tries to establish a distinct identity under the burden of history and of literary tradition.

The Left Behind Collection

Here is a comprehensive and comprehensible treatment of engineering thermodynamics from its theoretical foundations to its applications in real situations. The thermodynamics presented will prepare students for later courses in fluid mechanics and heat transfer, and practicing engineers will find the applications helpful in their professional work. The book is appropriate for an introductory undergraduate course in thermodynamics and for a subsequent course in thermodynamic applications. The chapters dealing with steam power plants, internal combustion engines, and HVAC are unmatched. The introductory chapter on turbomachinery is also unique. A thorough development of the second law of thermodynamics is provided in chapters 7-9. The ramifications of the second law receive thorough discussion; the student not only performs calculations, but understands the implications of the calculated results. Computer models created in TK Solver accompany each chapter and are particularly useful in the application areas. The TK Solver files provided with the book can be used as written or modified and merged into models developed to analyze new problems. The book has two particularly important strengths: its readability and the depth of its treatment of applications. The readability will make the content understandable to the average students; the depth in applications will make the book suitable for applied upper-level courses as well.

Health-conscious consumers read nutritional labels, but it's nearly impossible to get the nutrients we need with diet alone. To get the USDA-recommended daily quota of vitamin D, for example, you need to eat 15 eggs or 26 sardines; of iron, 414 almonds or 15 cups of broccoli. So we rely on nutritional supplements—vitamins and minerals, probiotics and enzymes—but the variety of pills, products, and elixirs on the market today is overwhelming. And, as we have seen in recent news, some of these products are downright fakes. Trusted natural health physician and bestselling author Tieraona Low Dog, M.D. provides a personalized approach to using nutritional supplements for your specific health needs, helping you navigate the complex and often confusing landscape of vitamins, minerals, and more. Dr. Low Dog explains the basics about every essential nutritional supplement and guides the reader in creating a personalized supplement plan, tailored to individual genetics, age, gender, and lifestyle. Low Dog evaluates current research, explains the relationship between food and supplements, describes how medications cause chemical imbalances in the body, and advises on how to judge brands and read labels. Low Dog engages and encourages readers to take charge of their own health and provides guidance to find the right combination of nutritional supplements to improve mood, strength, energy, and well-being.

The Canyon Ranch Guide to Living Younger Longer

The Anger Control Workbook (Easyread Large Edition)

This book explores the factors that influence violent rebellious political organisations to transform into other entities, such as political parties, criminal organisations and terrorist organisations. From the end of the Second World War until 1990, many events in the world centred on the bipolar struggle between the United States and the USSR. Although there were numerous civil wars occurring during the Cold War era, many of these conflicts went virtually unnoticed unless they were linked to the Cold War struggle for ideological dominance. In the aftermath of the fall of the Soviet Union, the number of intra-state conflicts was prevalent around the globe. Along with the occurrence of civil wars, a variety of violent political movements also developed. Examining cases from Latin America, Africa, Europe, and Asia, this book addresses how violent political movements transform during and after conflict into new types of organisations using the collective political violence transformative (CPVT) model. The study uses a combination of pre-existing literature from the fields of sociology and political

science, archival research, and interviews with movement members (former and active) conducted by the author. In studying the Provisional IRA and Sinn Féin, the Spear of the Nation (MK) and the African National Congress (ANC), the Abu Sayyaf Group and the Revolutionary Armed Forces of Colombia (FARC-EP), *Transforming Violent Political Movements* paints a picture of organisations that have to respond to their environments to survive. This book will be of much interest to students of political violence, terrorism, war and conflict studies, security studies and IR.
