Hailing from Japan, this craft craze began with decorating mobile phone cases with all things cute, glitzy, and sweet. Deco Den Desserts- a delightful Threads Select Booklet- is literally the icing on the cake, featuring everything from hand mirrors to jewellery to trainers, deliciously decorated with faux sweets and treats. A common embellishing theme, as you'll see in Deco Den Desserts, is decorating with cookies, cakes, and candy. One can find these sweet treats embellishing almost any style of DecoDen craft. Some embellishments are miniature versions of real sweets that look good enough to eat, and others are fantasy versions that look like they are straight from a pop music video. Both versions are equally cute and contain no calories! Deco Den Desserts shows you how to whip up a faux cake icing and apply the dimensional fabric paint (aka drizzle) to create drippy dessert sauces like chocolate and strawberry sauce. Deco Den Desserts provides all the instructions to get you started on no-bake glammed-up desserts, cakes, and parfaits, or embellishing DecoDen classics like mobile phone cases, jewellery and everything in between. So grab some icing and mini sweets and start decorating!

The book starts by setting out the duties of a building pathologist in the context of the modern roofing industry, defining failure and explaining its underlying causes. The main chapters then deal with the main specific types of failure: fire, shrinkage and roofing systems displacement, calendar shrinkage, foam insulation shrinkage and 'stretched' membranes, plasticizer migration, bitumen incompatibility, built-up roofing felt porosity, blistering, thermal insulation instability, foam insulation problems, torch applications, polymer dispersion, asphalt-glass fibre shingle splitting, lack of appropriate venting, problems with cool roofing and problems with organic fibre-portland cement shingles. The book concludes with an outline of the principal rules for long service life roofing.

Concrete folded plate roofs used to cover large open expanses of space can pose complex design problems soluble only through detailed mathematical analysis. This book introduces the engineer to practical schemes and practicalities, and goes on to provide multitudes of useful design tables, which allow linear interpolation, for a large range of various schemes of folded plate roofs to help the engineer with his designs. Design examples using both SI and USA (British Imperial) units are provided using these tables.

have wondered how to go about repairing or replacing them, then this is the book for you. Many of the technical books about roof tiling and slating are rather vague and conveniently ignore some of the trickier problems and how they can be resolved. In *Roof Tiling and Slating*, the author rejects this cautious approach. Kevin Taylor uses both his extensive knowledge of the trade and his ability to explain the subject in easily understandable terms, to demonstrate how to carry out the work safely to a high standard, using tried and tested methods. Topics covered: considers the various types of tiles, slates and roofing materials on the market and their uses, how to estimate the required quantities, and where to buy them; discusses how to check and assess a roof and how to identify and rectify problems; describes how to efficiently 'set out' roofs from small, simple jobs to larger and more complicated projects, thus making the work quicker, simpler and neater; examines the correct and the incorrect ways of installing background materials such as underlay, battens and valley liners; explains how to install interlocking tiles, plain tiles, and artificial and natural slates; covers both modern and traditional methods and skills, including cutting materials by hand without the assistance of power tools; provides invaluable guidance on repairs and maintenance issues, and highlights common mistakes and how they can be avoided.

In this fascinating collection of postings from his popular “Musings of an Energy Nerd” blog, Green Building Advisor's Martin Holladay cuts through the hype and myths about energy efficiency, sustainability, and green building to present the very best ways to make your home more energy efficient. Martin Holladay has been making weekly postings to his “Musings of an Energy Nerd” blog on Green Building Advisor since January 2009. Along the way, he has gathered a devoted following of “energy nerds” who await his weekly musings with rapt anticipation. For the first time, the 50 most popular postings have been assembled in book form to give homeowners a great opportunity to live a more energy-efficient life in their homes. The book begins with an overview of energy priorities, and a discussion of what we mean by terms like green and sustainable. Martin presents several options for energy upgrades for an existing house (from replacing windows to adding superinsulation) before looking at ways to improve the energy efficiency of a new house. Separate chapters follow on HVAC, domestic hot water, appliances, and renewable energy, before the
