Economics of Regulation and Antitrust

An examination of the relationship between competition and the deregulation and liberalisation of the US and European air transport sectors reveals that the structure of the air transport sector has undergone a number of significant changes. A growing number of airlines are entering into horizontal and vertical cooperative arrangements and integration including franchising, codeshare agreements, alliances, 'virtual mergers' and in some cases, mergers with other airlines, groups of airlines or other complementary lines of business such as airports. This book considers the current legal issues affecting the air transport sector incorporating recent developments in the industry, including the end of certain exemptions from EU competition rules, the effect of the EU-US Open Skies Agreement, the accession of new EU Member States and the Lisbon Treaty. The book explores the differing European and US regulatory approaches to the changes in the industry and examines how airlines have remained economically efficient in what is perceived as a complex and confused regulatory environment. Competition and Regulation in the Airline Industry will be of particular interest to academics and

students of competition law as well as EU law.

The Politics of European Competition Regulation

A distinguished economist examines competition, regulation, and stability in today's global banks. Does too much competition in banking hurt society? What policies can best protect and stabilize banking without stifling it? Institutional responses to such questions have evolved over time, from interventionist regulatory control after the Great Depression to the liberalization policies that started in the United States in the 1970s. The global financial crisis of 2007–2009, which originated from an oversupply of credit, once again raised questions about excessive banking competition and what should be done about it. *Competition and Stability in Banking* addresses the critical relationships between competition, regulation, and stability, and the implications of coordinating banking regulations with competition policies. Xavier Vives argues that while competition is not responsible for fragility in banking, there are trade-offs between competition and stability. Well-designed regulations would alleviate these trade-offs but not eliminate them, and the specificity of competition in banking should be accounted for. Vives argues that regulation and competition policy should be coordinated, with tighter prudential requirements in more competitive situations, but he also shows that supervisory and competition authorities should stand separate from each other, each pursuing its own objective. Vives reviews the theory and empirics of banking competition, drawing on up-to-date analysis that incorporates the characteristics of modern market-based banking, and he looks at regulation, competition policies, and crisis interventions in Europe and the United States, as well as in emerging economies. Focusing on why banking competition policies are necessary, *Competition and Stability in Banking* examines regulation's impact on the industry's efficiency and effectiveness.

Competition in Energy Markets

'Like a divorce, turnover is important for both partners: here workers and firms. Some turnover in a firm is probably good, but how much should there be, and how much is there? What are its drivers and consequences? And what, if anything, should we do about it? The current volume provides an extremely useful snapshot of this interdisciplinary literature, from which readers will come away with many ideas for future research.' - Andrew Clark, Paris School of Economics. France

Privatisation Competition and Regulation in the United Kingdom

Niamh Dunne undertakes a systematic exploration of the relationship between competition law and economic regulation as legal mechanisms of market control. Beginning from a theoretical assessment of these legal instruments as discrete mechanisms, the author goes on to address numerous facets of the substantive interrelationship between competition law and economic regulation. She considers, amongst other aspects, the concept of regulatory competition law; deregulation, liberalisation and 'regulation for competition'; the concurrent application of competition law in regulated markets; and relevant institutional aspects including

Read Online Competition And Regulation In The Postal And Delivery Sector Advances In Regulatory Economics

market study procedures, the distribution of enforcement powers between competition agencies and sector regulators, and certain legal powers that demonstrate a 'hybridised' quality lying between competition law and economic regulation. Throughout her assessment, Dunne identifies and explores recurrent considerations that inform and shape the optimal relationship between these legal mechanisms within any jurisdiction.

Imperfect Markets and Imperfect Regulation

This book charts the emergence of experimentalist governance in the implementation of EU competition law as a response to uncertainty and the limits of hierarchical enforcement in an increasingly dynamic and heterogeneous economic environment. It contributes to ongoing debates about the current state of EU competition law and provides an innovative account of emergent enforcement trends and its future direction. It also argues that an experimentalist evolution of competition law and market regulation attenuates concerns about the competitive strictures of EU law on national economic and regulatory institutions. Through its focus on experimentalist governance, the book provides guidance on completing experimentalist infrastructures for market regulation, as well as on the role of courts in triggering and sustaining experimentalist solutions. As such, it offers a novel perspective on implementing competition law in the EU and beyond.

Competition and Regulation in the Postal and Delivery Sector

Explores the implications of Asian forms of capitalism for the emerging global competition law regime.

Competition and Regulation in the Data Economy

Over the past thirty years, airports within the EU – including nearly a hundred newly built or rebuilt during that time – have undergone a major economic transformation. From mere infrastructure providers, airports have become diversified and complex commercial enterprises in competition with each other. This is the first and only book thus far to deal with the legal issues surrounding this important development, focusing on the impact of EU Directive 12/2009 on airport charges. Examining the use of airport infrastructure, the growing competition among airports, and the relations between airlines and airports, the author, a leading aviation law practitioner, covers such issues and topics as the following: - types of charges – landing, passenger, aircraft parking; - pricing factors determining airport charges; - vertical contractual relations between airports and airlines; - airport market power and dominance; - issues of consultation and transparency; - ability of airlines and passengers to switch to alternative airports; - application of state aid rules; - security charges; - environmental charges and schemes; and - price discrimination and differentiation. The presentation encompasses a critical analysis of the findings of case law, both international and European, on airport charges in the context of the new trend of airports and airlines concluding vertical agreements. As an examination of the economic regulation of EU airports due to the liberalization process, structural changes in the ownership status of many EU airports, and the emergence of new airline business

models (such as low-cost carriers), this book, the only one of its kind, will quickly become indispensable to practitioners, policymakers, and academics in aviation law.

Economic Regulation and Its Reform

EU Electronic Communications Law

The promotion of liberalized and deregulated markets by bilateral and multilateral aid donors, and by global institutions such as the WTO, has led to significant attention being paid to competition and regulatory reforms in developing economies. The process of reform involves the transfer and diffusion of market models derived from practice and theory in developed countries. However, in developing countries, regulation needs to do more than simply promote competitiveness and consumer interests: it also needs to ensure that the market nurtures development. By rigorously examining the numerous impacts of regulation, this book will help to fill a significant gap in the literature on economic and social development. The book, now available in paperback, draws together contributions from leading experts across a range of disciplines including economics, law, politics and governance, public management and business management. The authors begin with an extensive overview of the issues of regulation and competition in developing countries, and carefully illustrate the important themes and concepts involved. Using a variety of country and sector case studies, they move on to focus on the problems of applicability and adaptation that are experienced in the process of transferring best practice policy models from developed to developing countries. The book presents a clear agenda for further empirical research and is notable for its rigorous exploration of the links between theory and practice. Although there is substantial interest in competition and regulation, as yet there has been relatively little investigation of these issues in developing economies. This book redresses the balance and will be a valuable resource for researchers, academics, teachers and students interested in development economics and development studies. It will also be of great relevance for practitioners and policymakers working in the fields of competition policy and regulatory reform.

Contrived Competition

Competition Law and Regulation of Technology Markets takes a practical, integrated approach to EU and US competition law and regulation in the technology sector - including major trans-Atlantic cases such as Microsoft, Google/DoubleClick, and Intel, and important comparative issues such as refusal to supply (Microsoft, Trinko), margin squeeze (Deutsche Telekom, Telefonica, EU Guidance Paper, Linkline), communications regulation and data protection.

The Evolution of European Competition Law

Focusing on competition as an economic phenomenon, this book comparatively and comprehensively examines private arrangements in the liner and the bulk

sector, the liberalization of sabotage and port services, indirect competition-distorting factors and the latest developments on international regulation of carriage of goods by sea.

Competition, Regulation, and the Public Interest in the Motor Carrier Industry

An established authority on electronic communications in the EU, this fully updated work provides insight into the regulations and a thorough analysis of the applicable competition rules and regulatory framework.

Competition and Regulation in Electricity Markets

An examination of the relationship between competition and the deregulation and liberalisation of the US and European air transport sectors reveals that the structure of the air transport sector has undergone a number of significant changes. A growing number of airlines are entering into horizontal and vertical cooperative arrangements and integration including franchising, codeshare agreements, alliances, 'virtual mergers' and in some cases, mergers with other airlines, groups of airlines or other complementary lines of business such as airports. This book considers the current legal issues affecting the air transport sector incorporating recent developments in the industry, including the end of certain exemptions from EU competition rules, the effect of the EU-US Open Skies Agreement, the accession of new EU Member States and the Lisbon Treaty. The book explores the differing European and US regulatory approaches to the changes in the industry and examines how airlines have remained economically efficient in what is perceived as a complex and confused regulatory environment. Competition and Regulation in the Airline Industry will be of particular interest to academics and students of competition law as well as EU law.

Competition Law for the Digital Economy

To what extent should competition agencies act as market regulators? Competition Law as Regulation provides numerous insights from competition scholars on new trends at the interface of competition law and sector-specific regulation. By relying on the experiences of a considerable number of different jurisdictions, and applying a comparative approach to the topic, this book constitutes an important addition to international research on the interface of competition and regulation. It addresses the fundamental issues of the subject, and contributes to legal theory and practice. Topics discussed include foundations of the complex relationship of competition law and regulation, new forms of advocacy powers of competition agencies, competition law enforcement in regulated industries in general, information and telecommunications markets, and competition law as regulation in IP-related markets. Scholars in the two fields of law and economics will find the research aspects of the book to be of interest. Officials in competition and regulatory agencies will benefit from the practical relevance of the book.

Competition and Regulation in the Airline Industry

Shaping markets through competition and economic regulation is at the heart of addressing the development challenges facing countries in southern Africa. The contributors to *Competition Law and Economic Regulation: Addressing Market Power in southern Africa* critically assess the efficacy of the competition and economic regulation frameworks, including the impact of a number of the regional competition authorities in a range of sectors throughout southern Africa. Featuring academics as well as practitioners in the field, the book addresses issues common to southern African countries, where markets are small and concentrated, with particularly high barriers to entry, and where the resources to enforce legislation against anti-competitive conduct are limited. What is needed, the contributors argue, is an understanding of competition and regional integration as part of an inclusive growth agenda for Africa. By examining competition and regulation in a single framework, and viewing this within the southern African experience, this volume adds new perspectives to the global competition literature. It is an essential reference tool and will be of great interest to policymakers and regulators, as well as the rapidly growing ecosystem of legal practitioners and economists engaged in the field.

Leading Issues in Competition, Regulation, and Development

A thoroughly revised and updated edition of the leading textbook on government and business policy, presenting the key principles underlying sound regulatory and antitrust policy. Regulation and antitrust are key elements of government policy. This new edition of the leading textbook on government and business policy explains how the latest theoretical and empirical economic tools can be employed to analyze pressing regulatory and antitrust issues. The book departs from the common emphasis on institutions, focusing instead on the relevant underlying economic issues, using state-of-the-art analysis to assess the appropriate design of regulatory and antitrust policy. Extensive case studies illustrate fundamental principles and provide insight on key issues in regulation and antitrust policy. This fifth edition has been thoroughly revised and updated, reflecting both the latest developments in economic analysis and recent economic events. The text examines regulatory practices through the end of the Obama and beginning of the Trump administrations. New material includes coverage of global competition and the activities of the European Commission; recent mergers, including Comcast-NBC Universal; antitrust in the new economy, including investigations into Microsoft and Google; the financial crisis of 2007-2008 and the Dodd-Frank Act; the FDA approval process; climate change policies; and behavioral economics as a tool for designing regulatory strategies.

Competition Law and Economic Regulation

‘Digital competition’, a term and concept that has risen to the forefront of competition law, may be viewed as both promising and cautionary: on the one hand, it brings the promises of increased speed, efficiency and objectivity, and, on the other, it entails potential pitfalls such as hard-to-identify pathways to unfair pricing, dominant positions and their potential abuse, restriction of choice and abuse of personal data. Accordingly, jurisdictions around the world are taking measures to deal with the phenomenon. In this concise but thoroughly researched book – both informative and practical – lawyers from a prominent firm with a

Read Online Competition And Regulation In The Postal And Delivery Sector Advances In Regulatory Economics

specialised digital competition team take stock and examine the state of digital competition in the enforcement practices of six competition authorities in Europe, most of these forerunners in the field of digital competition policy and enforcement. The competition authorities surveyed are those of the European Union, the United Kingdom, France, Germany, the Netherlands and Belgium. For each, an overview, spanning the period from 2012 to mid-2019, includes not only landmark cases in which digital technologies have had a significant impact on the competition law outcome but also guidance documents such as speeches, policy statements, industry surveys and research reports. Activities and enforcement practices of the various authorities include the following and more: degree of activity; focus of the activity; enforcement styles; enforcement instruments; visible effectiveness of enforcement; and important insights and outlooks. Each overview contains separate chapters on the cartel prohibition, the prohibition of abuse of a dominant position and merger control. An additional chapter evaluates the similarities and differences in the enforcement practices and the positive and negative effects of digital competition in the jurisdictions investigated, and a concluding chapter offers recommendations. An indispensable guide to quickly and accessibly acquiring in-depth knowledge in competition law in the digital sector, this matchless volume is a must-read for any practitioner or academic who encounters competition law related to digital markets. The dilemmas and challenges of the new competition law reality – which is here already, like it or not – are clearly explained here for the benefit of regulators, academics, policymakers, judges, in-house counsel and lawyers specialising in competition law and intellectual property law.

Leading Issues in Competition, Regulation, and Development

This book examines if the conceptual underpinnings of competition law and international regulatory mechanisms can properly deal with the new economy.

Asian Capitalism and the Regulation of Competition

Professor Ullrich is thoughtful and attracted star scholars from many countries, so the papers and discussion are provocative and introduce recent economic thinking, although many are written by lawyers. . . The text is lucid and interesting, the thought innovative and anyone seriously interested in competition policy should read these papers and the comments with pleasure. Valentine Korah, World Competition This collection of papers and comments deserves to be widely read, and it should appeal to academics and practitioners alike. The great mix of topics and the variety of views offered make this a very stimulating contribution to the discussion of the new paradigm of EC competition law, the more economic approach, and its implications for the application and interpretation of the various EU antitrust rules. Thomas Eilmansberger, European Law Journal The editor should be congratulated for bringing together this diverse group of scholars whose spirited disagreements remind one of the many challenges faced in exploring the role and function of competition law. Giorgio Monti, European Review of Contract Law With contributions from leading scholars from all over Europe and the US, this book covers the major areas of substantive competition law from an evolutionary perspective. The leitmotiv of the book has been to assess the dividing line between safeguarding and regulating competition, which it does by reviewing the following

subjects: foundations of competition policy in the EU and the US strategic competition policy the evolution of European competition law from a national (Italian) perspective the block exemption of vertical agreements after four years the new Technology Transfer Block Exemption cooperative networking mergers in the media sector abuse of market power concepts of competition in sector specific regulation competition, regulation and systems coherence efficiency claims in EU competition law and sector specific regulation. The Evolution of European Competition Law will be of great interest to lawyers, economists, academics, judges and public officials working in the fields of competition law and policy.

Markets and the Media

And Bank-America, caught short with bad loans and a deep recession in the early eighties, nearly failed before Sam Armacost and then Tom Clausen achieved an amazing turnaround in the mid-1980s.

Competition and Regulation in the Airline Industry

Provides a review of regulatory reforms in developing countries, with a particular focus on the strengths and weaknesses of the 'best practice' model of reform, the significance of institutions of regulatory governance, and the impact of post-privatisation governance on development and poverty reduction agendas.

Competition and Economic Regulation in Water

'This volume collects a number of original, cutting-edge contributions that take the reader swiftly and easily to the frontier of research on most of the current hot topics in industrial organization, antitrust and regulation. Skillfully edited by two outstanding leaders in the field, the volume will be a precious source for students, researchers and practitioners that need to figure out what research has achieved in recent years on these important policy issues.' Giancarlo Spagnolo, SITE Stockholm School of Economics and University of Tor Vergata, Sweden This state-of-the-art volume highlights important recent research contributions covering all the significant themes surrounding competition policy and regulation, including financial regulation and multisided markets. Bringing scholars and policymakers to the frontiers of research and addressing the critical issues of the day, the book presents original important new theoretical and empirical results. The distinguished contributors include: P. Agrel, K. Alexander, J. Crémer, X. Dassiou, G. Deltas, F. Etro, L. Filistrucchi, P. Fotis, M. Gilli, J. Harrington Jr, T. Huertas, M. Ivaldi, B. Jullien, V. Marques, M. Peitz, Y. Spiegel, E. Tarrantino and G. Wood. Recent Advances in the Analysis of Competition Policy and Regulation will prove insightful for academic economists, consultants and policymakers interested in these fields.

Markets and the Media

Competition and Economic Regulation in Water: The Future of the European Water Industry reviews the main developments in economic regulation and competition in the European water industry and considers ways in which economic regulation and competition should be further developed. The book focusses on the best means of

regulating or introducing competition into the industry in light of its present structure. Competition and Regulation in Water: The Future of the European Water Industry concentrates on the water industry, however, many of the conclusions are equally applicable also to the wastewater industry. Contents Introduction Water industry fundamentals: the rationale for regulation and the scope for competition A framework for evaluating different models of water industry regulation England & Wales: private ownership and independent regulation France: competition for the market and contract-based regulation Germany: public-private partnerships and multi-sector utilities Developing water sector regulatory frameworks in less developed countries Appendix: The legislative framework for the water industry in England & Wales

International Regulatory Competition and Coordination

Recent years have seen a major growth in the European law concerning the operation of the energy industry, especially with respect to electricity and gas. Several directives have been adopted that are aimed at the promotion of competition in this key sector of the European economy. At the same time, the jurisprudence of the European Court had developed further on matters such as access to networks, import and export monopolies and security of supply. In this book the authors examine the principal legislation, Treaty provisions and decisions of the Court of Justice and Court of First Instance of the EU as they related to the promotion of competition in European energy markets. In particular, two chapters are devoted to a detailed analysis of the provisions of the two directives that set out common rules for the creation of an internal market in the electricity and gas sectors. In each case, the analysis is set in the context of the various programmes of energy market liberalization and privatization in the Member States, which are summarized in this book. However, the authors also take the wider pan-European context into account, explaining the requirements and the implications of the European Economic Area Agreement, the Energy Charter Treaty and the Europe Agreements with countries of Central and Eastern Europe. The approach adopted by the authors is both analytical and historical. They locate the legislation in the context of the EU Internal Market programme that began in the late 1980s and explain the roles played by the various parties (energy industries, consumers and EU institutions) in shaping the final legislation. Importantly, they explain how the framework character of the energy directives has led to further important rule-making in the implementation of the directives across the EU. They conclude that a co-ordinated response between the European Commission and the national regulators will be essential to resolve problems arising in the transition to a competitive energy market in the EU.

Competition, Regulation and the New Economy

The digital economy is gradually gaining traction through a variety of recent technological developments, including the introduction of the Internet of things, artificial intelligence and markets for data. This innovative book contains contributions from leading competition law scholars who map out and investigate the anti-competitive effects that are developing in the digital economy.

Competition Law as Regulation

This volume brings together a number of papers discussing the interrelationship among privatisation, competition and regulation. The papers make reference to the experience of different countries with privatisation in a wide range of infrastructure sectors.

Recent Advances in the Analysis of Competition Policy and Regulation

Competition and Regulation in Shipping and Shipping Related Industries

The Politics of European Competition Regulation provides an original and theoretically informed account of the political power struggles that have shaped the evolution of European competition regulation over the past six decades. Applying a critical political economy perspective, this book analyses the establishment and development of competition regulation at European Community and national level since the 1950s. It puts forth the central argument that competition regulation came to reflect the broader shift towards a neoliberal order since the 1980s. Buch-Hansen and Wigger argue that this shift, which took place against the background of the gradual transnationalisation of capitalist production and the economic crisis of the late 1970s, was driven by the European Commission in alliance with the emerging transnational capitalist class. The authors examine the political responses to the current global economic crisis in the fields of state aid, cartel prosecution and merger control and conclude that an alternative type of competition regulation, which forms part of a much broader transformation of the current socioeconomic order, is needed. This book will be of interest to students and scholars of (global) political economy, European integration and competition law.

Airport Competition Regulation in Europe

Worldwide, postal and delivery economics has attracted considerable interest. Numerous questions have arisen, including the role of regulation, funding the Universal Service Obligation, postal reform in Europe, Asia and North America, the future of national postal operators, demand and pricing strategies, and the principles that should govern the introduction of competition. Collected here are responses to these questions in the form of 24 essays written by researchers, practitioners, and senior managers from throughout the world. This volume will have a broad appeal, with an audience ranging from practitioners in the express and delivery industry, national Postal Operators and managers, to economists, regulators, competition lawyers, marketers, scholars in economic regulation, and institutional libraries.

Digital Competition Law in Europe

Privatisation, Competition and Regulation

The Oxford Handbook of Regulation

Regulation is often thought of as an activity that restricts behaviour and prevents the occurrence of certain undesirable activities, but the influence of regulation can also be enabling or facilitative, as when a market could potentially be chaotic if uncontrolled. This Handbook provides a clear and authoritative discussion of the major trends and issues in regulation over the last thirty years, together with an outline of prospective developments. It brings together contributions from leading scholars from a range of disciplines and countries. Each chapter offers a broad overview of key current issues and provides an analysis of different perspectives on those issues. Experiences in different jurisdictions and insights from various disciplines are drawn upon, and particular attention is paid to the challenges that are encountered when specific approaches are applied in practice. Contributors develop their own distinctive arguments relating to the central issues in regulation and apply scholarly rigour and clear writing to matters of high policy-relevance. The essays are original, accessible, and agenda-setting, and the Handbook will be essential reading both to students and researchers and to with regulatory and regulated professionals.

EU Competition Law and Regulation in the Converging Telecommunications, Media and IT Sectors

The essays in the volume attempt to address the success of efforts in the European Community, the US and elsewhere in the world to regulate in such a way as to accommodate both the interests of business and the wider interests of the public

Competition Law and Economic Regulation in Southern Africa

The past thirty years have witnessed a transformation of government economic intervention in broad segments of industry throughout the world. Many industries historically subject to economic price and entry controls have been largely deregulated, including natural gas, trucking, airlines, and commercial banking. However, recent concerns about market power in restructured electricity markets, airline industry instability amid chronic financial stress, and the challenges created by the repeal of the Glass-Steagall Act, which allowed commercial banks to participate in investment banking, have led to calls for renewed market intervention. *Economic Regulation and Its Reform* collects research by a group of distinguished scholars who explore these and other issues surrounding government economic intervention. Determining the consequences of such intervention requires a careful assessment of the costs and benefits of imperfect regulation. Moreover, government interventions may take a variety of forms, from relatively nonintrusive performance-based regulations to more aggressive antitrust and competition policies and barriers to entry. This volume introduces the key issues surrounding economic regulation, provides an assessment of the economic effects of regulatory reforms over the past three decades, and examines how these insights bear on some of today's most significant concerns in regulatory policy.

Monopoly and Competition and Their Regulation

The promotion of liberalized and deregulated markets by bilateral and multilateral aid donors, and by global institutions such as the WTO, has led to significant attention being paid to competition and regulatory reforms in developing economies. The process of reform involves the transfer and diffusion of market models derived from practice and theory in developed countries. However, in developing countries, regulation needs to do more than simply promote competitiveness and consumer interests: it also needs to ensure that the market nurtures development. By rigorously examining the numerous impacts of regulation, this book will help to fill a significant gap in the literature on economic and social development. The book, now available in paperback, draws together contributions from leading experts across a range of disciplines including economics, law, politics and governance, public management and business management. The authors begin with an extensive overview of the issues of regulation and competition in developing countries, and carefully illustrate the important themes and concepts involved. Using a variety of country and sector case studies, they move on to focus on the problems of applicability and adaptation that are experienced in the process of transferring best practice policy models from developed to developing countries. The book presents a clear agenda for further empirical research and is notable for its rigorous exploration of the links between theory and practice. Although there is substantial interest in competition and regulation, as yet there has been relatively little investigation of these issues in developing economies. This book redresses the balance and will be a valuable resource for researchers, academics, teachers and students interested in development economics and development studies. It will also be of great relevance for practitioners and policymakers working in the fields of competition policy and regulatory reform.

Competition and Stability in Banking

Competition Law and Regulation of Technology Markets

Contributing to a convergence of legal and economic approaches, *The Economics of Antitrust and Regulation in Telecommunications* integrates economic theory into current EU antitrust policy within the sector. The book addresses the role of competition and regulatory policies on a number of key issues in telecommunications, such as market definition, collective dominance, access to networks, and allocation of scarce resources.

The Economics of Antitrust and Regulation in Telecommunications

This incisive book provides a much-needed examination of the legal issues arising from the data economy, particularly in the light of the expanding role of algorithms and artificial intelligence in business and industry. In doing so, it discusses the pressing question of how to strike a balance in the law between the interests of a variety of stakeholders, such as AI industry, businesses and consumers.

Experimentalist Competition Law and the Regulation of Markets

This book presents the most thoroughgoing model yet offered to ensure the emergence of a genuinely competitive electronic communications industry in Europe. In the course of its in-depth analysis the discussion focuses on such factors as the following: EU telecommunications policy as revealed in liberalization and harmonization legislative measures; the EU electronic communications framework; case law covering issues of refusal to supply and the essential facilities doctrine; application of Article 82 EC to bottlenecks; specific types of an undertakings unilateral behaviour that may often occupy NRAs and competition authorities in the context of their ex post competition law investigations under Article 82 EC; strategic alliances and mergers in the move toward multimedia; access to premium content and the emergence of new media; the scope of content regulation in the online environment; and broadband (regulation of local loop unbundling and bitstream access). The book also provides practical guidance on issues concerning the complicated market definition and analysis mechanism promulgated by the European Commission's Recommendation and Guidelines.

Regulatory Governance in Developing Countries

The first textbook to present a comprehensive and detailed economic analysis of electricity markets, analyzing the tensions between microeconomics and political economy. The power industry is essential in our fight against climate change. This book is the first to examine in detail the microeconomics underlying power markets, stemming from peak-load pricing, by which prices are low when the installed generation capacity exceeds demand but can rise a hundred times higher when demand is equal to installed capacity. The outcome of peak-load pricing is often difficult to accept politically, and the book explores the tensions between microeconomics and political economy. Understanding peak-load pricing and its implications is essential for designing robust policies and making sound investment decisions. Thomas-Olivier Léautier presents the model in its simplest form, and introduces additional features as different issues are presented. The book covers all segments of electricity markets: electricity generation, under perfect and imperfect competition; retail competition and demand response; transmission pricing, transmission congestion management, and transmission constraints; and the current policy issues arising from the entry of renewables into the market and capacity mechanisms. Combining anecdotes and analysis of real situations with rigorous analytical modeling, each chapter analyzes one specific issue, first presenting findings in nontechnical terms accessible to policy practitioners and graduate students in management or public policy and then presenting a more mathematical analytical exposition for students and researchers specializing in the economics of electricity markets and for those who want to understand and apply the underlying models.
