century is witnessing a growing threat on human beings imposed by many sources, namely natural disasters, terrorism and other conflicts, warfare, and transportation accidents; all of which ignite the rise of major trauma incidents worldwide. Physicians, therefore, get involved in trauma management more and more frequently in time. They need to evaluate, diagnose, treat, and stabilize victims and help them take part in active and productive life as soon as possible. Technological advances have provided many techniques to augment trauma care and resuscitation, fracture healing, wound care, casts and splints, sutures, and transfusions. However, the successful management of trauma warrants a collaboration of emergency medicine, surgical disciplines, intensive care medicine, and almost all the resources of a hospital. This work is an example of a multidisciplinary approach that is a must to maximize synergistic efforts to deliver contemporary care for trauma victims of all ages throughout the world.

Emergency and Trauma Care for Nurses and Paramedics

This proceedings volume discloses the various and, at times, conflicting views regarding temporomandibular disorders (TMD) as presented at the Craniomandibular Institute's 10th Annual Squaw Valley Winter Seminar held in January 1991. The field of TMD has been long on testimonials and clinical opinion but short on scientific documentation. As a result, there is presently a growing concern in the field that scientific foundation is needed to support the various belief systems and to improve credibility. This seminar encouraged participants to openly discuss and expose the controversial issues plaguing the field and to provide clinical and basic research to support or to

question those issues. To this end, 14 internationally renowned experts assembled to discuss the current status of terminology, epidemiology, etiology, diagnoses, and management for TMD. This book is divided into four main parts, each of which helps to provide the reader with a better understanding of the complexity of TMD. A wide variety of scientific evidence, clinical experience, and informed opinions is presented. This variety will ensure that the volume will serve as the foundation for future discoveries in the study of TMD. As such, this book will be of interest to all who work within the field.

The purposes of this book is to give an overview of controversies that orthopaedic surgeons might have to consider when carrying out all levels of hip surgery. Contributions cover such important paediatric problems such as developmental dysplasia of the hip, Perthes disease, slipped capital femoral epiphysis and hip problems associated with neurological diseases. Traumatic conditions of the hip, including acetabular fractures and femoral neck fractures are covered in detail. Considerable emphasis is given to the field of both primarily and revision total hip replacement, with special emphasis on the difference which occur in Europe and North America. Like every other aspect of hip disease, the field of total hip arthroplasty is continuously changing to improve both the quality and durability of the clinical result. Finally, post-operative complications and their avoidance are covered, particularly in the fields of deep vein thrombosis prophylaxis and management of the infected total hip arthroplasty. The contributions in this volume are from an international array of experts in the field of hip surgery.
