Each issue is reviewed by experts to explain the core concept, development, current criticisms and controversies and concludes by identifying future avenues for further research. Issues covered include the transformation of the management accounting function, strategic management accounting, environmental management accounting, balanced scorecard, performance management in non-profit organizations, inter-organizational performance measurement practices between supply chain partners, beyond budgeting, activity-based approach, target costing and throughput accounting.

Cost Management

Management Accounting 2nd edition has been revised in response to changes in the global business environment. Unbridled access to information, intense competition and ongoing challenges in the corporate world have meant that cost accounting has become an increasingly important tool for managers and accountants alike. Most textbooks focus on

content knowledge and then expect students to 'magically' demonstrate skills such as decision-making and critical thinking. As many students fail to recognise the assumptions, limitations, behavioural implications and qualitative factors that influence managerial decision-making, this text will better prepare students for professional success by bridging the gaps between knowledge, skills and abilities. The textbook is written in a style that is accessible to students and includes chapter scene setters, realistic illustrative examples, self-study problems and unique problem material structured to encourage students to think about accounting problems and problem-solving more complexly.

Aircraft Propulsion

Costing Systems provides a structured overview of costing system research to explain the co-existence of different costing practices. This body of research has come to prescriptive conclusions, which will be valuable and insightful to practitioners designing costing systems and managers using reported cost data. The monograph is structured around four primary purposes of cost measurement: decision-making, cost management, inventory valuation for financial and tax accounting, and control and performance measurement. Part 1 of the monograph relates to the production or supply choices made by costing system designers. Part 2 moves onto the demand side for cost information. This monograph aims to be useful both to novices in the costing field who are searching for a primer on this literature as well as for people familiar with the literature who are interested in a structured overview and thoughts on where future research avenues may lead.

Corporate Finance

Kris Cole throws light on the gap between theory and practice in the 5th edition of Management - Theory and Practice. She explains management theory in everyday language, and puts it in a context that makes it easy to understand. This resource will help you develop the vocabulary you need to communicate effectively with colleagues and equips you with models and frameworks to tackle management challenges. In addition it will enable you to strengthen your 'hard skills', like managing poor performance, being more directive and solving problems permanently.

COST MANAGEMENT: MEASURING MONITORING AND MOTIVATING PERFORMANCE

The emphasis of MANAGERIAL ACCOUNTING, 6e is on teaching students to use accounting information to best manage an organization. In a practice Hilton pioneered in the first edition, each chapter is written around a realistic business or focus company that guides the reader through the topics of that chapter. Known for balanced examples of Service, Retail, Nonprofit and Manufacturing companies, Hilton offers a clear, engaging writing style that has been praised by instructors

and students alike. As in previous editions, there is significant coverage of contemporary topics such as activity-based costing, target costing, the value chain, customer profitability analysis, and throughput costing while also including traditional topics such as job-order costing, budgeting and performance evaluation.

Cost Management

"Cost Management: Measuring, Monitoring, and Motivating Performance, Third Canadian Edition, was written to help students learn to appropriately apply cost accounting methods in a variety of organizational settings. To achieve this goal, students must also develop professional competencies, such as strategic/critical thinking, risk analysis, decision making, ethical reasoning, and communication. Most textbooks focus on content knowledge and then expect students to "magically" demonstrate professional competencies. As an author team, we bring to this textbook extensive knowledge about cost accounting as well as about the best approaches for teaching and learning professional competencies. This textbook bridges the gap between typical student performance and what we would like students to be able to do by: maintaining a central focus on business decision making; explicitly addressing risk and biases; adopting a writing style that is accessible and interesting to students; concentrating on all types of organizations; focusing on ethical reasoning; simultaneously challenging and guiding students to learn."--Preface.

Human Resource Management

Here's a taste of what's inside: The difference between a company structure and a trust. The 7 different types of trusts and how to use them. Why you should rarely buy an investment in your own name. How to protect your assets from lawsuits, taxes and creditors. How to maximise the tax benefits of your investments. How you can pass your wealth onto your children and have it protected for generations. How to protect your business assets. That tax is a game which can be played by everyone, not just the rich.
