General Chemistry

Mariëlle Hoefnagels' passion as a classroom instructor is evident in *Biology: Concepts and Investigations*, an introductory biology textbook written to explain the general concepts of biology at a level of detail that allows students to understand concepts rather than memorise details. New media integration icons, upgraded PowerPoint presentations, new tutorial animations based on textbook art, upgraded Connect question banks, and adaptive technologies like LearnSmart and Smartbook capitalise on the power of technology to enhance student understanding. Key goals of the book are to: help the student connect the concepts in the book to their everyday lives; show connections between ideas within the chapter and to material they have already studied; teach introductory students how to be more active learners.

Problem Solving in General Chemistry

The Zumdahls' hallmark problem-solving approach and focus on conceptual development come to life in this new edition with interactive problems that promote active learning and visualization. Enhanced by a wealth of online support that is seamlessly integrated with the program, Chemistry's solid explanations, emphasis on modeling, and outstanding problem sets make both teaching and learning chemistry more meaningful and accessible than ever before. The authors emphasize a qualitative approach to chemistry in both the text and the technology program before quantitative problems are considered, helping to build comprehension. The emphasis on modeling throughout the narrative addresses the problem of

rote memorization by helping students to better understand and appreciate the process of scientific development. By stressing the limitations and uses of scientific models, the authors show students how chemists think and work.
