Deixis as a field of research has generated increased interest in recent years. It is crucial for a number of different subdisciplines: pragmatics, semantics, cognitive and contrastive linguistics, to name just a few. The subject is of particular interest to experts and students, philosophers, teachers, philologists, and psychologists interested in the study of their language or in comparing linguistic structures. The different deictic structures – not only the items themselves, but also the oppositions between them – reflect the fact that neither the notions of space, time, person nor our use of them are identical cross-culturally. This diversity is not restricted to the difference between languages, but also appears among related dialects and language varieties. This volume will provide an overview of the field,

focusing on Romance languages, but also reaching beyond this perspective. Chapters on diachronic developments (language change), comparisons with other (non-)European languages, and on interfaces with neighboring fields of interest are also included. The editors and authors hope that readers, regardless of their familiarity with Romance languages, will gain new insights into deixis in general, and into the similarities and differences among deictic structures used in the languages of the world.

The third edition succeeds the fifth update of second edition. One of the main features has been the adoption of new and revised international standards, notably

the International Standard Identifier for Libraries and Related Organizations, the ISBN 13 and the linking ISSN. New fields have been added for recording the Persistent Record Identifier. Uniform Conventional Headings for Legal and Religious texts are now catered for with separate fields. A number of fields have been revised: archival materials, manuscripts and documentation produced by the ISSN International Centre.

Postal Culture

New Hampshire Register and Legislative Manual

A Manual of Select Medical Bibliography

The nationalization of the postal service in Italy transformed post-unification letter writing as a cultural medium. Both a harbinger of progress and an expanded, more efficient means of circulating information, the national postal service served as a bridge between the private world of personal communication and the public arena of information exchange and production of public opinion. As a growing number of people read and wrote letters, they became part of a larger community that regarded the letter not only as an important channel in the process of information exchange, but also as a necessary instrument in the education and modernization of the nation. In *Postal Culture*, Gabriella Romani examines the role of the letter in Italian literature, cultural production, communication, and politics. She argues that the reading and writing of letters, along with epistolary fiction, epistolary manuals, and correspondence published in newspapers, fostered a sense of community and national identity and thus became a force for social change.
