## Precious Heart

Why did President Kennedy invite Soviet co-operation in project Moon-landing during September 1963? And why did Russia lose interest in the race to be first on the Moon? David Grant's mission to seize the tiny

source of a rare mineral could be the answer. But only death could offer cover deep enough for him to outwit SATAN--the international Society for the Activation of Terror, Anarchy and Nihilism--which operates as much against Moscow and Peking as against the Free World. A split-second escape from attempted assassination then gave NATO's top security ace the chance he needed, and transportation from Paris to London inside a coffin whilst under the influence of a paralysing drug was his terrifying start to a fantastic series of adventures. George Brown Mair was born at Troon in Scotland in May, 1914 and was educated at Kilmarnock Academy and Glasgow University, where he qualified as a doctor. He visited most European countries, Asia from Japan to Turkey, South America, the West Indies, Canada, the United States, and parts of Africa. With his Dutch wife Trudie, he visited nearly all the Communist countries in Europe, during the course of which they were the first to photograph the interior of the Kremlin palaces and met many Soviet leaders.

This book is designed to serve senior-level engineering students taking a capstone design course in fluid and thermal systems design. It is built from the ground up with the needs and interests of practicing engineers in mind; the emphasis is on practical applications. The book begins with a discussion of design methodology, including the process of bidding to obtain a project, and project management techniques. The text continues with an introductory overview of fluid thermal systems (a pump and pumping system, a household air conditioner, a baseboard heater, a water slide, and a vacuum cleaner are among the examples given), and a review of the properties of fluids and the equations of fluid mechanics. The text then offers an in-depth discussion of piping systems, including the economics of pipe size selection. Janna examines pumps (including net positive suction head considerations)

and piping systems. He provides the reader with the ability to design an entire system for moving fluids that is efficient and cost-effective. Next, the book provides a review of basic heat transfer principles, and the analysis of heat exchangers, including double pipe, shell and tube, plate and frame cross flow heat exchangers. Design considerations for these exchangers are also discussed. The text concludes with a chapter of term projects that may be undertaken by teams of students. Mining is the foremost source of minerals that all countries find essential for maintaining and improving their standards of living. Mined materials are needed to construct roads and hospitals, to build automobiles and houses, to make computers and satellites, to generate electricity, and to provide many other goods and services that consumers enjoy. The high tech industries and even the better known resource industries are all dependent, in some way, on the mining industry. But exploring, extraction and processing of minerals require big material and labour costs and there is a big number of acute problems to face, such as: environment and water pollution, worsening of mining-geological conditions, depletion

of minerals that can be extracted only by conventional methods, rock pressure manifestation, big depths of the deposits and transportation of the minerals on the surface. In order to find modern solutions there is a big number of scientists and engineers all over the world dedicating their research to most current problems and inventions of innovative technologies and techniques in mining. Some of the most important results of such research is presented in this book and covers the following topics: management of strain and stress state of the massif, underground coal gasification, substantiation of rational parameters of various types of support, ventilation in underground openings, design of mine workings and other vital questions.

### **Shadow Hunted**

Provides an accessible guide to company law in Hong Kong. The text is based on the latest provisions of the Companies Ordinance and cases decided since the summer of 1998, in both the Hong Kong and English jurisdictions.

### **The Misadventures of Salem Hyde**

Currently, the installed capacity of power generation in India is 104,917 MW and by 2012 another 100,000 MW will be added. With this addition, the requirement of power and distribution transformers will grow enormously, as will the emphasis on quality and performance. The design of a transformer is critical to its quality as are men, machines and materials. This

book is a hands-on guide covering design, process control of manufacturing technique, installation, erection, commissioning and maintenance of distribution transformers. It also covers failure analysis and remedial measures for increasing the longevity of transformers. Apart from explaining the design aspect of transformers, the book lists the requirements of ISO 9000 in the process of manufacturing technique up to the final stages of product testing, inspection and despatch.

Use case analysis is a methodology for defining the outward features of a software system from the user's point of view. *Applying Use Cases, Second Edition*, offers a clear and practical introduction to this cutting-edge software development technique. Using numerous realistic examples and a detailed case study, you are guided through the application of use case analysis in the development of software systems. This new edition has been updated and expanded to reflect the Unified Modeling Language (UML) version 1.3. It also includes more complex and precise examples, descriptions of the pros and cons of various use case documentation techniques, and discussions on how other modeling approaches relate to use cases. *Applying Use Cases, Second Edition*, walks you through the software development process, demonstrating how use cases apply to project inception, requirements and risk analysis, system architecture, scheduling, review and testing, and documentation. Key topics include:

- Identifying use cases and describing actors
- Writing the flow of events, including basic and alternative paths
- Reviewing use cases for completeness and correctness
- Diagramming use cases with activity diagrams and sequence diagrams
- Incorporating user interface description and data description documents
- Testing architectural patterns and designs with use cases

An entire section of the book is devoted to identifying common mistakes and

describing their solutions. Also featured is a handy collection of documentation templates and an abbreviated guide to UML notation. You will come away from this book with a solid understanding of use cases, along with the skills you need to put use case analysis to work.

### **Roxburghe Ballads**

(Note: a new file with improved images was uploaded 02/19/15) Effective LabVIEW Programming by Thomas Bress is suitable for all beginning and intermediate LabVIEW programmers. It follows a “teach by showing, learn by doing” approach. It demonstrates what good LabVIEW programs look like by exploring a small set of core LabVIEW functions and common design patterns based on a project drawn from the Certified LabVIEW Developer exam. These patterns build on each other. They provide a firm starting point for most beginning and intermediate projects. Overall, the presentation emphasizes how to use the dataflow paradigm of LabVIEW to create effective programs that are readable, scalable and maintainable. The concepts presented in this book are reinforced by eleven problem sets with full solutions. This book will improve your fluency in LabVIEW and, in the process, will teach you how to “think” in LabVIEW. Yarn shop owner Kath Rutledge is looking forward to the grand opening of the Blue Plum Vault, a co-op of small shops on Main Street. But in the week before the grand opening, Kath and her needlework group, TGIF (Thank Goodness It's Fiber), hear rumors of an unpleasant rivalry developing between two of the new shopkeepers. Then, the day before the grand opening, an exquisite tablecloth that Kath has fallen in love with—the pride of Belinda's shop—is found cut to shreds. Belinda accuses Nervie of the outrage, but Nervie has an airtight alibi: she was at Kath's shop, the Weaver's Cat, teaching a crewel embroidery class. Despite worries over the rivalry and vandalism, the opening is a success—until Belinda is found dead, stabbed in the back with a pair of scissors from the Weaver's Cat. Geneva, the ghost who haunts Kath's store, claims she saw the murderer leaving the scene of the crime. But the ghost is the ultimate unreliable witness—only Kath and her shop manager can see or hear her. That means it's up to Kath, TGIF, and especially Geneva the ghost to solve the crime before the killer cuts another life short.

ORACLE 11G: SQL is an introduction to the fundamental SQL language used in all relational databases today. This textbook is not simply a study guide; it is written for those who have just a basic knowledge of databases and can be used in a course on this latest implementation of SQL from Oracle. Learning these concepts and techniques prepares

students for the first exam in both the Oracle Database Administrator and Oracle Developer Certification Exam paths and offers a solid understanding of using Oracle 11g SQL effectively. The first part of ORACLE 11G: SQL focuses on creating database objects, including tables, constraints, indexes, sequences, synonyms, and users, and manipulating data. The second part explores data query techniques, such as row filtering, joins, single-row functions, aggregate functions, subqueries, and views. Several advanced query topics, such as ROLLUP, CUBE, and TOP-N analysis, are also introduced. To help students bridge these SQL topics to further studies, appendixes introduce SQL tuning, compare Oracle's SQL syntax with other databases (MS SQL Server and MySQL), and explain how to embed SQL in applications (ASP.NET). An overview of the two Oracle connection interface tools, SQL Developer and SQL Plus, is also provided.
