This toolkit - made available in English, French and Spanish - will be promoted as practical guidance to assist in the implementation of the national seed strategies. It will provide a number of practical capacity building tools for essential stages of the seed value chain and targeted primarily at seed sector practitioners who will participate in special training workshops to acquire pertinent technical knowledge and will be expected in return to create a multiplier effect through further follow-up FFS trainings down to the level of seed traders and farmers. In doing so, the toolkit will be used as guidance for conducting country-led workshops and other training activities aimed at strengthening quality seed delivery systems and seed regulatory mechanisms in selected countries. The development of capacity in the production of high quality seeds, the seed replacement rates, true seed cost and realistic seed pricing mechanisms as well as the role of different stakeholders are

of critical importance in the process of the formulation of national seed policies, which is one of the core areas of FAO's delivery at the national level.

Dynamic Business Law: The Essentials

When it comes to food, Americans seem to have a pretty great deal. Our grocery stores are overflowing with countless varieties of convenient products. But like most bargains that are too good to be true, the modern food system relies on an illusion. It depends on endless abundance, but the planet has its limits. Through beautifully-told stories from around the world, Kevin Walker reveals the unintended consequences of our myopic focus on quantity over quality. By the end of the journey, we not only understand how the drive to produce ever more food became hardwired into the American psyche, but why shifting our mindset is essential.

The Last Voyage of Somebody the Sailor

For many outsiders, the word “ranching” conjures romantic images of riding on horseback through rolling grasslands while living and working against a backdrop of breathtaking mountain vistas. In this absorbing memoir of life in the Wyoming high country, Mary Budd Flitner offers a more authentic glimpse into the daily realities of ranch life—and what it takes to survive in the ranching world. Some of Flitner’s recollections are humorous and lighthearted. Others take a darker turn. A modern-day rancher with decades of experience, Mary has dealt with the hardships and challenges that come with this way of life. She’s survived harsh conditions like the “winter of 50 below” and economic downturns that threatened her family’s livelihood. She’s also wrestled with her role as a woman in a profession that doesn’t always treat her as equal. But for all its challenges, Flitner has also savored ranching’s joys, including the ties that bind multiple generations of families to the land. My Ranch, Too begins with the story of her great-grandfather, Daniel Budd, who in 1878 drove a herd of cattle into Wyoming Territory and settled his family in an area where conditions seemed favorable. Four generations later, Mary grew up on this same portion of land, learning how to ride horseback and take care of livestock. When she married Stan, she simply moved from one ranch to another, joining the Flitner family’s Diamond Tail Ranch in Wyoming’s Big Horn Basin. The Diamond Tail is not Mary’s alone to run, as she is quick to acknowledge. Everybody pitches in, even the smallest of children. But when Mary takes the responsibility of

gathering a herd of cattle or makes solo rounds at the crack of dawn to check on the livestock, we have no doubt that this is indeed her ranch, too.

The American Reaper adopts a network approach to account for the international diffusion of harvesting technology from North America, from the invention of the reaper through to the formation of a dominant transnational corporation, International Harvester. Much previous historical research into industrial networks focuses on industrial districts within metropolitan centres, but by focusing on harvesting - a typically rural technology - this book is able to analyse the spread of technological knowledge through a series of local networks and across national boundaries. In doing so it argues that the industry developed through a relatively stable stage from the 1850s into the 1890s, during which time many firms shared knowledge within and outside the US through patent licensing, to spread the diffusion of the American style of machines to establishments located around the industrial world. This positive cooperation was further enhanced through sales networks that appear to be early expressions of managerial firms. The book also reinterprets the rise of giant corporations, especially International Harvester Corporation (IHC), arguing that mass production was achieved in Chicago in the 1880s, where unprecedented urban growth made possible a break with the constraints felt elsewhere in the dispersed production system. It unleashed an unchecked competitive market economy with destructive tendencies throughout the transnational 'American reaper' networks; a previously stable and expanding production system. This is significant because the rise of corporate capital in this

industry is usually explained as an outworking of national natural advantage, as an ingenious harnessing of science and technology to solve production problems, and as a rational solution to the problems associated with the worst forms of unregulated competition that emerged as independent firms developed from small-scale, artisanal production to large-scale manufacturers, on their own and within the separate and isolated US economy. The first study dedicated to the development and diffusion of American harvesting machine technology, this book will appeal to scholars from a diverse range of fields, including economic history, business history, the history of knowledge transfer, historical geography and economic geography.

The first axial flow combine transformed the industry and was hailed as the most significant piece of farm equipment built in the 20th century. The axial flow used advanced technology to process crops faster and more efficiently than anything else on the market. The axial flow started with research done by a rogue Swedish engineer in the 1950s, was continued in secret by a group of dedicated engineers from East Moline, Illinois, who did their work in a top-secret garage that only a select few were allowed to enter. The book tells the story of how extensive research and development allowed IH to build a new machine that took the market by storm. Done with dozens of interviews of engineers, salespeople, and

customers, the book captures the behind the scenes drama and the cloak and dagger encounters with rival companies personnel and machines. The dramatic text is accompanied by more than 300 archival images, concept drawings, sketches, and new photography of the machines and men at work today.

Dynamic Business Law: The Essentials is appropriate for the one-semester Business Law course. It contains the basics of business law but does not get

bogged down in the kind of details that are more appropriate in an upper-level law class. The text provides an examination of the basic questions, concepts, and legal rules of business law. Emphasis on the BUSINESS in business law. Dynamic Business Law: The Essentials emphasizes the tie of legal issues back to the core business curriculum. This will help both students and faculty. Faculty need to know how this is integrated as they are constantly 'defending' the inclusion of this course in the business curriculum. And students need to understand how the concepts tie to their future business careers. Emphasis on TEACHING. Many professors teaching this course are attorneys first and academics second. They do not have a lot of time to prepare or think about how to apply this information effectively for their business students. Dynamic Business Law: The Essentials contains a helpful instructor's manual, particularly for the many adjuncts teaching this course. Emphasis on CRITICAL THINKING. Neil Browne, one of the co-authors of this text, has written a successful text on critical thinking. His framework is included in Dynamic Business Law: The Essentials as well - to help students learn how to frame and reframe a question/issue. Critical thinking questions are also included at the end of each case, to tie in this component even further.

As a leading Confederate general, Braxton Bragg (1817–1876) earned a reputation

for incompetence, for wantonly shooting his own soldiers, and for losing battles. This public image established him not only as a scapegoat for the South's military failures but also as the chief whipping boy of the Confederacy. The strongly negative opinions of Bragg's contemporaries have continued to color assessments of the general's military career and character by generations of historians. Rather than take these assessments at face value, Earl J. Hess's biography offers a much more balanced account of Bragg, the man and the officer. While Hess analyzes Bragg's many campaigns and battles, he also emphasizes how his contemporaries viewed his successes and failures and how these reactions affected Bragg both personally and professionally. The testimony and opinions of other members of the Confederate army--including Bragg's superiors, his fellow generals, and his subordinates--reveal how the general became a symbol for the larger military failures that undid the Confederacy. By connecting the general's personal life to his military career, Hess positions Bragg as a figure saddled with unwarranted infamy and humanizes him as a flawed yet misunderstood figure in Civil War history.
