The theory of travelling waves described by parabolic equations and systems is a rapidly developing branch of modern mathematics. This book presents a general picture of current results about wave solutions of parabolic systems, their existence, stability, and bifurcations. With introductory material accessible to non-

mathematicians and a nearly complete bibliography of about 500 references, this book is an excellent resource on the subject.

Visi baru kehidupan

The world of cinematography has changed more in the last few years than it has since it has in 1929, when sound recording was introduced. New technology, new tools and new methods have revolutionized the art and craft of telling stories visually. While some aspects of visual language, lighting and color are eternal, shooting methods, workflow and cameras have changed radically. Even experienced film artists have a need to update and review new methods and equipment. These change affect not only the director of photography but also the director, the camera assistants, gaffers, and digital imaging technicians. Cinematography: Theory and Practice covers both the artistry and craftsmanship of cinematography and visual storytelling. Few art forms are as tied to their tools and technology as is cinematography. Take your mastery of these new tools,

techniques, and roles to the next level with this cutting-edge roadmap from author and filmmaker Blain Brown. Whether you are a student of filmmaking, just breaking into the business, currently working in the industry and looking to move up to the next level, or an experienced professional who wants to update their knowledge of tools and techniques, this book provides both a basic introduction to these issues as well as more advanced and in-depth coverage of the subject. The companion website features additional material, including lighting demonstrations, basic methods of lighting, using diffusion and other topics. Topics Include: Visual language Visual storytelling Continuity and coverage Cameras and digital sensors Exposure techniques for film and video Color in-depth Understanding digital images Waveform monitors, vectorscopes, and test charts Using linear, gamma, and log encoded video Image control and grading on the set The tools and basics of film lighting ASC-CDL, ACES and other new methods Optics and focus Camera movement Set operations Green screen, high speed and other topics

Keajaiban Discovery Learning Pada Pembelajaran Fisika SMA Materi Gerak Parabola

Ibn al-Haytham adalah seorang ilmuwan Islam yang ahli dalam bidang sains, falak, matematika, geometri, dan pengobatan. Ia dikenal sangat ahli dalam bidang-bidang ilmu optik khususnya penyelidikannya mengenai cahaya. Selain sains, Ibn al-Haytham juga banyak menulis mengenai falsafah, logika, metafisik, dan persoalan yang berkaitan dengan keagamaan. Beliau turut menulis ulasan dan ringkasan terhadap karya-karya sarjana terdahulu. Penulisan filsafatnya banyak tertumpu kepada aspek kebenaran dalam masalah yang menjadi perdebatan pada zamannya. Buku ini menitikberatkan pada kajian falsafah sebagaimana digagas oleh Ibn al-Haytham. Pandangan-pandangan filosofisnya telah memberikan beberapa dasar perkembangan ilmu sains dan pada saat yang sama, tulisan filsafatnya telah membuktikan keaslian pemikiran sarjana Islam dalam bidang ilmu tersebut yang relatif independen dan tak kalah dengan pemikiran-pemikiran filsafat Yunani kuno. Pembaca, baik dosen, mahasiswa maupun kalangan umum yang tertarik dengan filsafat, khususnya filsafat Islam, dapat memperoleh wawasan yang bagus dengan membaca buku ini.
