Three previous volumes of this series by Colin Ronan are each available in hardback as well as paperback. Volume I introduces the reader to the country of China: its history, geography and language. The major part of this book is devoted to the history of scientific thought in China itself. In Volume II, the first section deals with mathematics, and this is followed by a section dealing with mathematics. Then follow sections on astronomy, meteorology and the earth sciences. The volume closes with a description of various aspects of Chinese physics. Volume III looks in some detail at one of the greatest contributions the Chinese made to physics - the discovery of the magnetic compass.

This authoritative and comprehensive handbook is the definitive work on the current state of the art of Biometric

Presentation Attack Detection (PAD) – also known as Biometric Anti-Spoofing. Building on the success of the previous, pioneering edition, this thoroughly updated second edition has been considerably expanded to provide even greater coverage of PAD methods, spanning biometrics systems based on face, fingerprint, iris, voice, vein, and signature recognition. New material is also included on major PAD competitions, important databases for research, and on the impact of recent international legislation. Valuable insights are supplied by a selection of leading experts in the field, complete with results from reproducible research, supported by source code and further information available at an associated website. Topics and features: reviews the latest developments in PAD for fingerprint biometrics, covering optical coherence tomography (OCT) technology, and issues of interoperability; examines methods for PAD in iris recognition systems, and the application of stimulated pupillary light reflex for this purpose; discusses advancements in PAD methods for face recognition-based biometrics, such as research on 3D facial masks and remote photoplethysmography (rPPG); presents a survey of PAD for automatic speaker recognition (ASV), including the use of convolutional neural networks (CNNs), and an overview of relevant databases; describes the results yielded by key competitions on fingerprint liveness detection, iris liveness detection, and software-based face anti-spoofing; provides analyses of PAD in fingervein recognition, online handwritten signature verification, and in biometric technologies on mobile devices includes coverage of international standards, the E.U. PSDII and GDPR directives, and on different perspectives on presentation attack evaluation. This text/reference is essential reading for anyone involved in biometric identity verification, be they students, researchers, practitioners, engineers, or technology consultants. Those new to the field will also benefit from a number of introductory chapters, outlining the basics for the most important biometrics.

Hair is subject to either intrinsic (i.e. physiological) aging or extrinsic (i.e. premature) aging that can be attributed to external factors. The intrinsic factors can be associated with genetic mechanisms and are subject to individual variations, whereas external factors include ultraviolet radiation, air pollution, smoking, and possibly nutrition. Leading experts have contributed to this book which offers a practical approach to the evaluation and management of various forms of alopecia, including their pathogenesis, the diagnostic procedures involved, medical treatments, and nutritional issues. A completely new surgical technique for hair transplantation that leaves behind sufficient follicle unit tissue to regenerate hairs is also described. Being comprehensive and easy-to-read, this book should be very useful for dermatologists who wish to diagnose

and treat their patients with hair problems more effectively.

A Critical and Exegetical Commentary on Deuteronomy

In December 1986, U.S. EPA's Assistant Administrator for Water initiated a major study of the Agency's surface water monitoring activities. The resulting report, entitled "Surface Water Monitoring: A Framework for Change", emphasizes the restructuring of existing monitoring programs to better address the Agency's current priorities, e.g., toxics, nonpoint source impacts, and documentation of "environmental results." The study also provides specific recommendations on effecting the necessary changes. Principal among these are: 1. To issue guidance on cost-effective approaches to problem identification and trend assessment. 2. To accelerate the development and application of promising biological monitoring techniques. In response to these recommendations, the Assessment and Watershed Protection Division developed the rapid bioassessment protocols (RBPs) designed to provide basic aquatic life data for water quality management purposes such as problem screening, site ranking, and trend monitoring, and produced a document in 1989. Although none of the protocols were meant to provide the rigor of fully comprehensive studies, each was designed to supply pertinent, cost-effective information when applied in the appropriate context. As the technical guidance for biocriteria has been developed by EPA, states have found these protocols useful as a framework for their monitoring programs. This document was meant to have a selfcorrective process as the science advances; the implementation by state water resource agencies has contributed to refinement of the original RBPs for regional specificity. This revision reflects the advancement in bioassessment methods since 1989 and provides an updated compilation of the most cost-effective and scientifically valid approaches. The primary purpose of this document is to describe a practical technical reference for conducting cost-effective biological assessments of lotic systems. The protocols presented are not necessarily intended to replace those already in use for bioassessment nor is it intended to be used as a rigid protocol without regional modifications. Instead, they provide options for agencies or groups that wish to implement rapid biological assessment and monitoring techniques. This guidance, therefore, is intended to provide basic, cost-effective biological methods for states, tribes, and local agencies that (1) have no established bioassessment procedures, (2) are looking for alternative methodologies, or (3) may need to supplement their existing programs (not supersede other bioassessment approaches that have already been successfully implemented).

The Books of Enoch

Parasitology continues to benefit from taking an evolutionary approach to its study. Tree construction, character-mapping, tree-based evolutionary interpretation, and other developments in molecular and morphological phylogenetics have had a profound influence and have shed new light on the very nature of host-parasite relations and their coevolution. Life cycle complexity, parasite ecology and the origins and evolution of parasitism itself are all underpinned by an understanding of phylogeny. The Evolution of Parasitism - A Phylogenetic Perspective aims to bring together a range of articles that exemplifies the phylogenetic approach as applied to various disciplines within parasitology and as applied by parasitologists. Unified by the use of phylogenies, this book tackles a wide variety of parasite-specific biological problems across a diverse range of taxa. Includes important contributions from leading minds in the field such as Serge Morand,

Francisco Ayala and Mark Blaxter, among others Second in the ISI Parasitology List in 2002 with an Impact Factor of 4.818 Series encompasses over 35 years of parasitology coverage

Practical HDRI

The present dictionary is a practical exercise in word-compilation to facilitate the study of Sanskrit language. Based on Webster's complete English dictionary it includes general terms of all sciences and such technical terms as could be duly represented by Sanskrit equivalents actually existing in that language. Besides the general vocabulary quotations from the works of famous authors have been inserted to render the connotation of a word easily intelligible. It is also designed to

help scholars translate any passage from English into Sanskrit. It covers a very large field—Epics such as the Ramayana and Mahabharata, Puranas and Upapuranas, Smṛti and Nīti literature, Darśanas or Systems of Philosophy, such as Nyāya, Vedānta, Mīmāṃsā, Sāṅkhya and Yoga, Grammar, Rhetoric, Poetry in all its branches, Dramatic and Narrative literature, Mathematics, Medicine, Botany, Astronomy, Music and other technical or scientific branches of learning. Thus, it embraces all words occurring in the general post-Vedic literature. It includes most of the important terms in Grammar. It gives quotations and references to the peculiar and remarkable meanings of words, especially such as occur in books prescribed for study in the Indian and foreign universities. It also renders explanation of important technical terms occurring in different branches of Sanskrit learning. To add to its usefulness the work includes three appendices.

The ecology and importance of marine parasites are discussed in the second part of the book, where contributions investigate behavioural and ecological aspects of parasitism and discuss the evolution and zoogeography of marine parasites. In addition, the economic, environmental and medical significance of these organisms is outlined, particularly their importance in aquaculture and their effects on marine mammals and birds. Written by an international team of contributors, the emphasis is on a thorough grounding in marine parasitology combined with reviews of novel concepts and cutting-edge research.

Handbook of Biometric Anti-Spoofing

For over 100 years, the animal books and stories of beloved children's author Thornton W. Burgess have delighted millions of children and their parents; more than half his seventy books remain in print today. However, there was much more to Burgess, the man, than just a writer of children's books: he was a dedicated naturalist who was honored by prestigious scientific institutions for his advocacy of wildlife and conservation practices that resonate today. His books, syndicated columns, and radio programs both entertained and educated children, introducing them to wildlife habitat, species extinction, and roadside litter. Some books became the basis of *Fables of the Green Forest*, an internationally popular children's 1970s television cartoon. *Nature's Ambassador* explores Burgess's life and legacy, from his Cape Cod childhood to the present. With engaging text and historical pictures, this new biography will be a valuable addition to collections of historians, environmentalists, educators, librarians, and parents.

The Biology of Stentor summarizes all that has been learned about the biology of a certain group of ciliate protozoa: the stentors. Topics covered range from form and function in Stentor to behavior, fine structure, growth and division, and reorganization. Regeneration is also discussed, along with polarity, metabolism, genetics, and primordium development. This volume is comprised of 20 chapters and begins with a characterization of Stentor, with emphasis on its particular advantages in addressing general problems of biology. The reader is then introduced to form and function in Stentor, particularly *S. coeruleus*. The following chapters focus on the behavior (food selection, swimming, response to light, etc.) of stentors and the fine points of structure in terms of which this behavior is to be explained and which demonstrate the highly complex and precise achievements of morphogenesis. The remaining chapters explore growth and division in Stentor as well as the course of reorganization and regeneration; development of the oral primordium and how it is activated and inhibited; rate of regeneration in relation to the polar axis; fusion masses of whole stentors; and reconstitution in disarranged stentors. Various species of Stentor are also described, together with the techniques used to study them. The final chapter deals with hypotheses concerning the morphogenesis of ciliates. This book will be of interest to students and practitioners of biology and physiology.

A fully revised review of the latest research in molecular basis of plant abiotic stress response and adaptation Abiotic stressors are non-living environmental stressors that can have a negative impact on a plant's ability to grow and thrive in a given environment. Stressors can range from temperature stress (both extreme heat and extreme cold) water stress, aridity, salinity among others. This book explores the full gamut of plant abiotic stressors and plants molecular responses and adaptations to adverse environmental conditions. The new edition of Plant Abiotic Stress provides up-to-date coverage of the latest research advances in plant abiotic stress adaptation, with special emphasis on the associated and integrative aspects of physiology, signaling, and molecular genetics. Since the last edition, major advances in whole genome analysis have revealed previously unknown linkages between genes, genomes, and phenotypes, and new biological and omics approaches have elucidated previously unknown cellular mechanisms underlying stress tolerance. Chapters are organized by topic, but highlight processes that are integrative among diverse stress responses. As with the first edition, Plant Abiotic Stress will have broad appeal to scientists in fields of applied agriculture, ecology, plant sciences, and biology.

Nature's Ambassador

Why is the social group that society most often looks to for warmth, intimacy, and love also characterized by cruelty and violence? This book attempts to answer that seemingly ironic question. The authors examine aspects of family stress from both social and cultural viewpoints and conclude that violence grows out of the nature of social arrangements and cannot

be explained in terms of the personalities of husbands and wives. They emphasize the fundamental contradictions built into family life as it is now constituted, and point out that counseling and family therapy alone will not decrease the level of violence in family settings. Real change will come about only with a restructuring of the relations between women and men, and that in turn is dependent upon a fundamental reallocation of power and status in society at large. In their examination of the apparently irrational or bizarre aspects of family life, the authors of this book move beyond the problem of physical violence to an understanding of the nature of the family itself.
