Through a Window

This beginner biography takes a look into the life and career of Jane Goodall and her groundbreaking discoveries of apes. Complete with full-bleed relevant and historical photographs, timeline, glossary, and index.

Great Apes

The renowned British primatologist continues the “engrossing account” of her time among the chimpanzees of Gombe, Tanzania (Publishers Weekly). In her classic, *In the Shadow of Man*, Jane Goodall wrote of her first ten years at Gombe. In *Through a Window* she continues the story, painting a more complete and vivid portrait of our closest relatives. On the shores of Lake Tanganyika, Gombe is a community where the principal residents are chimpanzees. Through Goodall’s eyes we watch young Figan’s relentless rise to power and old Mike’s crushing defeat. We learn how one mother rears her children to succeed and another dooms hers to failure. We witness horrifying murders, touching moments of affection, joyous births, and wrenching deaths. As Goodall compellingly tells the story of this intimately intertwined community, we are shown human emotions stripped to their essence. In the mirror of chimpanzee life, we see ourselves reflected. “A humbling and exalting book . . . Ranks with the great scientific achievements of the twentieth century.” —The Washington Post “[An] absolutely smashing account . . . Thrilling, affectionate, intelligent—a classic.” —Kirkus Reviews, starred review

Jane Goodall

An introduction to chimpanzee behavior and conservation, synthesizing findings from long-term field studies in the African rainforest belt.

Visions of Caliban

THIRTEEN-YEAR OLD EVA wakes up in the hospital unable to remember anything since the picnic on the beach. Her mother leans over the bed and begins to explain. A traffic accident, a long coma . . . But there is something, Eva senses, that she's not being told. There is a price she must pay to be alive at all. What have they done, with their amazing medical techniques, to save her?

Following Fifi: My Adventures Among Wild Chimpanzees: Lessons from our Closest Relatives

An engaging account of the research and key findings on Taï chimpanzees to celebrate the 40th anniversary of this project.

Untamed

Your inner Chimp can be your best friend or your worst enemy this is the Chimp Paradox Do you sabotage your own happiness and success? Are you struggling to make sense of yourself? Do your emotions sometimes dictate your life? Dr. Steve Peters explains that we all have a being within our minds that can wreak havoc on every aspect of our lives—be it business or personal. He calls this being "the chimp," and it can work either for you or against you. The challenge comes when we try to tame the chimp, and persuade it to do our bidding. The Chimp Paradox contains an incredibly powerful mind management model that can help you be happier and healthier, increase your confidence, and become a more successful person. This book will help you to: —Recognize how your mind is working —Understand and manage your emotions and thoughts —Manage yourself and become the person you would like to be Dr. Peters explains the struggle that takes place within your mind and then shows you how to apply this understanding. Once you're armed with this new knowledge, you will be able to utilize your chimp for good, rather than letting your chimp run rampant with its own agenda.

The Third Chimpanzee

Donated.

Harvest for Hope

The woman who devoted her life to studying chimps in Africa looks back on her life, from her early love of animals to her years in the bush observing primates, often sacrificing life's more stable pleasures

The Watcher

"This biography for children will trace Goodall's life, but each chapter will also focus on two or more the chimpanzees that she observed, with information in sidebars about these particular animals. Along with biographical details, the book will explore the ethical issues that surround Goodall's work and show what has changed in our understanding of Great Apes. What do we know today about these animals in terms of language, speech, tool use, and DNA? How has sophisticated technology - GPS systems, Satellite imagery, portable digital microphones - been used to gain new information about animal populations."--

The New Chimpanzee

Recent discoveries about wild chimpanzees have dramatically reshaped our understanding of these great apes and their kinship with humans. We now know that chimpanzees not only have genomes similar to our own but also plot political coups, wage wars over territory, pass on cultural traditions to younger generations, and ruthlessly strategize for resources, including sexual partners. In *The New Chimpanzee*, Craig Stanford challenges us to let apes guide our inquiry into what it means to be human. With wit and lucidity, Stanford explains what the past two decades of chimpanzee field research has taught us about the origins of human social behavior, the nature of aggression and communication, and the divergence of humans and apes from a common ancestor. Drawing on his extensive observations of chimpanzee behavior and social dynamics, Stanford adds to our knowledge of chimpanzees' political intelligence, sexual power plays, violent ambition, cultural diversity, and adaptability. *The New Chimpanzee* portrays a complex and even more humanlike ape than the one Jane Goodall popularized more than a half century ago. It also sounds an urgent call for the protection of our nearest relatives at a moment when their survival is at risk.

The Chimps of Fauna Sanctuary

The "moving" true story of a woman fighting to give a group of chimpanzees a second chance at life (People). In 1997, Gloria Grow started a sanctuary for chimps retired from biomedical research on her farm outside Montreal. For the indomitable Gloria, caring for thirteen great apes is like presiding over a maximum-security prison, a Zen sanctuary, an old folks' home, and a New York deli during the lunchtime rush all rolled into one. But she is first and foremost creating a refuge for her troubled charges, a place where they can recover and begin to trust humans again. Hoping to win some of this trust,

journalist Andrew Westoll spent months at Fauna Farm as a volunteer, and in this “incisive [and] affecting” book, he vividly recounts his time in the chimp house and the histories of its residents (Kirkus Reviews). He arrives with dreams of striking up an immediate friendship with the legendary Tom, the wise face of the Great Ape Protection Act, but Tom seems all too content to ignore him. Gradually, though, old man Tommie and the rest of the “troop” begin to warm toward Westoll as he learns the routines of life at the farm and realizes just how far the chimps have come. Seemingly simple things like grooming, establishing friendships and alliances, and playing games with the garden hose are all poignant testament to the capacity of these animals to heal. Brimming with empathy and entertaining stories of Gloria and her charges, *The Chimps of Fauna Sanctuary* is an absorbing, bighearted book that grapples with questions of just what we owe to the animals who are our nearest genetic relations. “A powerful look at how we treat our closest relatives.” —The Plain Dealer “I knew the prison-like conditions of the medical research facility from which Gloria rescued these chimpanzees; when I visited them at their new sanctuary I was moved to tears. . . . Andrew Westoll is a born storyteller: *The Chimps of Fauna Sanctuary*, written with empathy and skill, tenderness and humour, involves us in a world few understand. And leaves us marveling at the ways in which chimpanzees are so like us, and why they deserve our help and are entitled to our respect.” —Dr. Jane Goodall “This book will make you think deeply about our relationship with great apes. It amazed me to discover the behaviors and feelings of the chimpanzees.” —Temple Grandin, author of *Animals in Translation*

Me . . . Jane

New in the Little People, BIG DREAMS series, discover the life of Vivienne Westwood, the flame-haired fashion designer and impresario. When Vivienne was a young woman, she wasn't sure how a working class girl from England could make a living in the art world. But after discovering her passion for design and jewelry making, she erupted onto the fashion scene with a bang. Vivienne's designs became iconic, and she became famous for letting her clothes speak for themselves. This moving book features stylish and quirky illustrations and extra facts at the back, including a biographical timeline with historical photos and a detailed profile of the designer's life. Little People, BIG DREAMS is a best-selling series of books and educational games that explore the lives of outstanding people, from designers and artists to scientists and activists. All of them achieved incredible things, yet each began life as a child with a dream. This empowering series offers inspiring messages to children of all ages, in a range of formats. The board books are told in simple sentences, perfect for reading aloud to babies and toddlers. The hardcover versions present expanded stories for beginning readers. Boxed gift sets allow you to collect a selection of the books by theme. Paper dolls, learning cards, matching games, and other fun learning tools provide even more ways to make the lives of these role models accessible to children. Inspire the next generation of outstanding people who will change the world with Little People, BIG DREAMS!

Our Inner Ape

The authors use Shakespeare's *Tempest* as a metaphor for the relationship between people and chimps, exploring the very human aspects of this remarkable species. Original.

Vivienne Westwood

From the time she was a girl, Jane Goodall dreamed of a life spent working with animals. Finally she had her wish. When she was twenty-six years old, she ventured into the forests of Africa to observe chimpanzees in the wild. On her expeditions she braved the dangers with leopards and lions in the African bush. And she got to know an amazing group of wild chimpanzees -- intelligent animals whose lives, in work and play and family relationships, bear a surprising resemblance to our own.

My Life with the Chimpanzees

Acclaimed picture book biographer Jeanette Winter has found her perfect subject: Jane Goodall, the great observer of chimpanzees. Follow Jane from her childhood in London watching a robin on her windowsill, to her years in the African forests of Gombe, Tanzania, invited by brilliant scientist Louis Leakey to observe chimps, to her worldwide crusade to save these primates who are now in danger of extinction, and their habitat. Young animal lovers and Winter's many fans will welcome this fascinating and moving portrait of an extraordinary person and the animals to whom she has dedicated her life. *The Watcher* was named a Best Book of the Year by the Boston Globe, Kirkus Reviews, Booklist, and the Bank Street College of Education. From the Hardcover edition.

We are All Completely Beside Ourselves

An exhilarating quest into a remote African forest to examine chimpanzees and understand the roots of human behavior. As a young student, John Crocker embarked on the adventure of a lifetime, spending eight months in the Gombe forest working with Jane Goodall. He followed families of wild chimpanzees from sunrise to sunset and learned the fundamental behavioral traits of these chimps as they raised their offspring. One chimpanzee captivated him. Her name was Fifi, and she displayed extraordinary patience and reassurance toward her infant, Freud. Upon returning home and becoming a doctor, Crocker found himself incorporating the lessons he learned from Fifi into his work as a father and physician. When he witnessed his young patients rocketing around his exam room, he would picture Fifi's patience and tacit approval of Freud's uninhibited and joyful exploration. Crocker shares how his time spent with our closest animal cousins has helped him better understand his patients with ADD, anxiety, and depression, and how primate traits hardwired into our own natural behavior help chimpanzees protect their community, raise their young, and survive. Finally, chronicling his return to Gombe thirty-six years later with his own son, he reflects on how his experience with the chimps has come full circle. An illuminating book

that will raise thought-provoking questions about the evolution of human behavior and the importance of patience and strong family bonds, Following Fifi provides a greater understanding of what it means to be human.

Understanding Chimpanzees

'One of history's most impressive field studies; an instant animal classic' TIME Jane Goodall's classic account of primate research provides an impressively detailed and absorbing account of the early years of her field study of, and adventures with, chimpanzees in Tanzania, Africa. It is a landmark for everyone to enjoy.

Seeds of Hope

A counterterrorism spy describes his leadership of the campaign that routed al Qaeda and the Taliban in the weeks after the September 11 attacks, offering insight into the ways in which the Afghanistan campaign changed American warfare.

Eva

From world-renowned scientist Jane Goodall, as seen in the new National Geographic documentary Jane, comes a provocative look into the ways we can positively impact the world by changing our eating habits. "One of those rare, truly great books that can change the world." - John Robbins, author of The Food Revolution The renowned scientist who fundamentally changed the way we view primates and our relationship with the animal kingdom now turns her attention to an incredibly important and deeply personal issue-taking a stand for a more sustainable world. In this provocative and encouraging book, Jane Goodall sounds a clarion call to Western society, urging us to take a hard look at the food we produce and consume-and showing us how easy it is to create positive change.Offering her hopeful, but stirring vision, Goodall argues convincingly that each individual can make a difference. She offers simple strategies each of us can employ to foster a sustainable society. Brilliant, empowering, and irrepressibly optimistic, HARVEST FOR HOPE is one of the most crucial works of our age. If we follow Goodall's sound advice, we just might save ourselves before it's too late.

The Chimpanzees of the Tai Forest

Profiles the life of the primatologist who was the first scientist to study wild chimpanzees in their natural environment.

The Art of Intelligence

Knowledge of wild chimpanzees has expanded dramatically. This volume, edited by Martin Muller, Richard Wrangham, and David Pilbeam, brings together scientists who are leading a revolution to discover and explain human uniqueness, by studying our closest living relatives. Their conclusions may transform our understanding of human evolution.

In the Shadow of Man

This is a unique look at conservation of the species and Ben's life-long love of chimps, illustrated with full colour photos. For over a decade, Ben Garrod has studied chimpanzees to find ways to protect and conserve them. We join Ben on a journey that has taken him around the world, studying eastern chimps in the humid forests of Uganda and the critically endangered western chimps of Liberia. In his trademark infectious, lighthearted style, Ben describes encounters with chimpanzees that highlight the different threats they face. From the illegal international pet trade, to bushmeat markets, and the effects of relentless habitat destruction – not to mention how your new furniture, your toothpaste and even your mobile phone are all implicated in their falling numbers. In an interview with world-renowned primatologist Dr Jane Goodall, Ben shows how we can protect the chimps of the future and help conserve this endlessly fascinating species.

The Chimpanzee & Me

Lavishly illustrated with more than eighty full-color photographs, a moving, personal account of the author's findings about the socialization of these endangered animals is intended to increase awareness about the need to protect the chimpanzees.

Jane Goodall: A Champion of Chimpanzees

This essential biography of one of the most influential women of the past century shows how truly remarkable Jane Goodall's accomplishments have been. Goodall was a secretarial school graduate when Louis Leakey, unable to find someone with more fitting credentials, first sent her to Gombe to study chimpanzees. In this acclaimed work, Dale Peterson details how this young woman of uncommon resourcefulness and pluck would go on to set radically new standards in the study of animal behavior. He vividly captures the triumphs and setbacks of her dramatic life, including the private quest that led to her now-famous activism. Peterson, a longtime Goodall collaborator, has a unique knowledge of his subject. Candid and illuminating, this work will be a revelation even to readers who are familiar with the public Goodall as presented in her own writing.

Trailblazers: Jane Goodall

A biography on the life, career, and views of one of today's best-known scientists traces Goodall's path from an early fascination with animals to her landmark, but controversial, studies of chimps in the wild and conservation efforts.

Chimpanzees and Human Evolution

Learn about the life of Jane Goodall, a pioneering scientist who became the world expert on chimpanzees, in this early reader biography. Jane Goodall was the first person to study wild chimpanzees up close in a rain forest. She befriended the chimps and discovered amazing facts about their behaviors. What she learned forever changed how people look at these animals. Beginning readers will learn about the milestones in Jane Goodall's life in this Level Two I Can Read biography. This biography includes a timeline and photos all about the life of this inspiring scientist. This biography reader includes a timeline and historical photos all about the life of this inspiring figure. Jane Goodall: A Champion of Chimpanzees is a Level Two I Can Read, geared for kids who read on their own but still need a little help. Whether shared at home or in a classroom, the engaging stories, longer sentences, and language play of Level Two books are proven to help kids take their next steps toward reading success.

My Life with the Chimpanzees, the Fascinating Story of One of the World's Most Celebrated Naturalists

Winner of the Caldecott Honor Patrick McDonnell-beloved, bestselling author-artist and creator of the Mutts syndicated comic strip--shares the inspiring story of young Jane Goodall, the legendary and inspiring conservationist featured in the hit documentary film Jane. In his characteristic heartwarming style, Patrick McDonnell tells the story of the young Jane Goodall and her special childhood toy chimpanzee named Jubilee. As the young Jane observes the natural world around her with wonder, she dreams of "a life living with and helping all animals," until one day she finds that her dream has come true. With anecdotes taken directly from Jane Goodall's autobiography, McDonnell makes this very true story accessible for the very young--and young at heart. One of the world's most inspiring women, Dr. Jane Goodall is a renowned humanitarian, conservationist, animal activist, environmentalist, and United Nations Messenger of Peace. In 1977 she founded the Jane Goodall Institute (JGI), a global nonprofit organization that empowers people to make a difference for all living things.

Chimpanzee Politics

For many years, experiments using chimpanzees have been instrumental in advancing scientific knowledge and have led to new medicines to prevent life-threatening and debilitating diseases. However, recent advances in alternate research tools have rendered chimpanzees largely unnecessary as research subjects. The Institute of Medicine, in collaboration with the

National Research Council, conducted an in-depth analysis of the scientific necessity for chimpanzees in NIH-funded biomedical and behavioral research. The committee concludes that while the chimpanzee has been a valuable animal model in the past, most current biomedical research use of chimpanzees is not necessary, though noted that it is impossible to predict whether research on emerging or new diseases may necessitate chimpanzees in the future.

Who Is Jane Goodall?

British naturalist Jane Goodall provides an intimate portrait of a group of chimpanzees in the jungles of Africa which she has studied for many years.

Africa in My Blood

The well-known English zoologist describes her early interest in animals and how this led to her study of chimpanzees at the Gombe Stream Reserve in Tanzania.

Hope for Animals and Their World

"Precise but eminently readable and indeed exciting This excellent book achieves the dual goal which eludes so many writers about animal behavior -- it will both fascinate the non-specialist and be seen as an important contribution to science." -- Times Literary Supplement

Chimpanzees in Biomedical and Behavioral Research

Meet history's game changers! This biography series is for kids who loved Who Was? and are ready for the next level. In July 1960, Jane Goodall went into the wilderness in Tanzania to study chimpanzees. For years she camped out with the chimps, observing their behavior and making amazing discoveries! Jane had always been fascinated by animals and knew she wanted to make learning more about them her life's work. Find out how this girl who loved animals became one of history's greatest trailblazers! Trailblazers is a biography series that celebrates the lives of amazing pioneers, past and present, from all over the world.

The Chimpanzees I Love

Argues that such social virtues as cooperation, empathy, and morality are as genetically inherent as aggressive and

competitive behaviors, drawing on research with two ape species whose DNA most closely resembles that of humans to explain how ape instincts can inform readers about human behavior. Reprint. 50,000 first printing.

Wild Chimpanzees

Coming of age in middle America, 18-year-old Rosemary evaluates how her entire youth was defined by the presence and forced removal of an endearing chimpanzee who was secretly regarded as a family member and who Rosemary loved as a sister. By the best-selling author of The Jane Austen Book Club.

Jane Goodall

Thanks to classic studies such as Jane Goodall's *The Chimpanzees of Gombe*, we know a great deal about our closest primate relative, but much remains to be discovered about these endlessly fascinating family members. Even their genus name, *Pan*, taken from the Greek god who represented the spirit of nature, aptly characterizes their elusiveness, for, like nature, chimpanzee behavior is a "giant jigsaw puzzle," as Goodall puts it. This book, a definitive summary of current knowledge about chimpanzees and bonobos, is a significant step toward solving the puzzle. Virtually every major chimpanzee specialist from around the world--Japan, the Netherlands, Great Britain, Africa, the United States--has contributed to this landmark volume. It contains important contributions by Japanese researchers who have been working in Africa for as many years as Goodall and whose work is not readily accessible in the West. *Understanding Chimpanzees* examines a wide range of topics, including social behavior and ecology in the field, the rich variety of cultural traditions between one population and another in Africa and elsewhere, behavior in captivity, and the incredible cognitive abilities of chimpanzees in language acquisition laboratories. Of special interest is the strong coverage of bonobos (pygmy chimpanzees). The authors also concentrate on conveying a better appreciation of chimpanzee intelligence through the description of various ongoing investigations, particularly ones that examine signing interactions, vocabulary testing and modulation, and symbol acquisition. In addition to the Foreword, Jane Goodall contributes a review of her own work at Gombe, her proposal for a "ChimpanZoo" project, and an update on the status of conservation in Tanzania. The book contains a major section on chimpanzee conservation in captivity and in the wild, documenting the threat to chimpanzee habitat and survival. This work draws from a broad range of disciplines, including ethology, psychology, anatomy, biology, anthropology, conservation, and ecology and will attract readers pursuing ideas in all these fields. Over 100 photographs and drawings illustrate the text, which has been carefully assembled and edited by Paul G. Heltne, Director of the Chicago Academy of Sciences, and Linda A. Marquardt, the editor of *Science Learning in the Informal Setting*.

The Chimp Paradox

From New York Times bestselling author and world-renowned scientist Jane Goodall, as seen in the National Geographic documentary Jane, comes a fascinating examination of the critical role that trees and plants play in our world. Seeds of Hope takes us from Goodall's home in England to her home-away-from-home in Africa, deep inside the Gombe forest, where she and the chimpanzees are enchanted by the fig and plum trees they encounter. She introduces us to botanists around the world, as well as places where hope for plants can be found, such as The Millennium Seed Bank. She shows us the secret world of plants with all their mysteries and potential for healing our bodies as well as Planet Earth. Looking at the world as an adventurer, scientist, and devotee of sustainable foods and gardening--and setting forth simple goals we can all take to protect the plants around us--Goodall delivers an enlightening story of the wonders we can find in our own backyards.

My Friends, the Wild Chimpanzees

The Chimpanzee Family Book

The Development of an Extraordinary Species We human beings share 98 percent of our genes with chimpanzees. Yet humans are the dominant species on the planet -- having founded civilizations and religions, developed intricate and diverse forms of communication, learned science, built cities, and created breathtaking works of art -- while chimps remain animals concerned primarily with the basic necessities of survival. What is it about that two percent difference in DNA that has created such a divergence between evolutionary cousins? In this fascinating, provocative, passionate, funny, endlessly entertaining work, renowned Pulitzer Prize-winning author and scientist Jared Diamond explores how the extraordinary human animal, in a remarkably short time, developed the capacity to rule the world . . . and the means to irrevocably destroy it.

In My Family Tree

Some people lost their sense of proportion, others their sense of scale, but Simon Dykes, a middle-aged, successful London painter, has lost his sense of perspective in a most disturbing fashion. After a night of routine, pedestrian debauchery, traipsing from toilet to toilet, and imbibing a host of narcotics on the way, Simon wakes up cuddled in his girlfriend's loving arms. Much to his dismay, however, his girlfriend has turned into a chimpanzee. To add insult to injury, the psychiatric crash team sent to deal with him as he flips his lid is also comprised of chimps. Indeed, the entire city is overrun by clever primates, who, when they are not jostling for position, grooming themselves, or mating some of the females, can be found driving Volvos, hanging out on street corners, and running the world. Nonetheless convinced that he is still a human, Simon

is confined to the emergency psychiatric ward of Charing Cross Hospital, where he becomes the patient of Dr. Zack Busner, clinical psychologist, medical doctor, anti-psychiatrist, and former television personality—an expert at the height of his reign as alpha male. As Busner attempts to convince him that “everyone who is fully sentient in this world are chimpanzees,” Simon struggles with the horrifying delusion that he is really a human trapped in a chimp’s body. Written with the same brilliant satiric wit that has distinguished Self’s earlier fiction, *Great Apes* is a hilarious, often disturbing, and absolutely original take on man’s place in the evolutionary chain. In a strange and twisted tale that recalls Jonathan Swift and Franz Kafka’s *Metamorphosis*, Will Self’s comic genius is impossible to ignore.

Jane Goodall

From world-renowned scientist Jane Goodall, as seen in the new National Geographic documentary *Jane*, comes an inspiring message about the future of the animal kingdom. With the insatiable curiosity and conversational prose that have made her a bestselling author, Goodall - along with Cincinnati Zoo Director Thane Maynard - shares fascinating survival stories about the American Crocodile, the California Condor, the Black-Footed Ferret, and more; all formerly endangered species and species once on the verge of extinction whose populations are now being regenerated. Interweaving her own first-hand experiences in the field with the compelling research of premier scientists, Goodall illuminates the heroic efforts of dedicated environmentalists and the truly critical need to protect the habitats of these beloved species. At once a celebration of the animal kingdom and a passionate call to arms, *HOPE FOR ANIMALS THEIR WORLD* presents an uplifting, hopeful message for the future of animal-human coexistence. *PRAISE FOR HOPE FOR ANIMALS AND THEIR WORLD* "Goodall's intimate writing style and sense of wonder pull the reader into each accountThe mix of personal and scientific makes for a compelling read." -Booklist "These accounts of conservation success are inspirational." - Publishers Weekly
