Quantitative Analysis Chemistry - Definition, Methods

1.2. Toxicity of Aflatoxins. From the foregoing (Figure 1), it can be observed that the primary derivatives of aflatoxin B₁ biotransformation comprise (a) aflatoxin M₁ and aflatoxin-exo-8,9-epoxide (products of CYP1A2 activity) and (b) aflatoxin Q₁ and aflatoxin-exo-8,9-epoxide (products of CYP3A4 activity). Aflatoxins M₁ and Q₁, although toxic, are less reactive with other molecules and

Machine-Learning Guided Quantum Chemical and Molecular Dynamics Calculations to Design Novel Hole-Conducting Organic Materials. The Journal of Physical Chemistry A 2020 , 124 (40) , 8330-8340.

Development and Testing of the OPLS All-Atom Force Field

In a Dumas experiment, 0.1877g of an organic substance yielded 31.7cc of nitrogen gas at 14 °C and 758mm Hg pressure. Calculate the percentage of the nitrogen in the compound. (Aqueous tension at 14 °C = 12mm) Solution: Volume of N₂ at STP = $V_1 + (P - p) \frac{273}{t + 273} \times 760$. Substituting the values $V_1 = 31.7$ x $(758 - 12) \times \frac{273}{(14 + 273) \times 760}$

Over 15% efficiency all-small-molecule organic solar cells

1. Introduction. Organic solar cell (OSC) has attracted intensive attention due to its unique potential, such as solution processing, light weight and excellent mechanical flexibility, and semitransparent devices , , , , , . In recent years, extensive research efforts on material design and device optimization lead to the power conversion efficiencies (PCEs) exceeding 17% for polymer based
