"Social networks fundamentally shape our lives. Networks channel the ways that information, emotions, and diseases flow through populations. Networks reflect differences in power and status in settings ranging from small peer groups to international relations across the globe. Network tools even provide insights into the ways that concepts, ideas and other socially generated contents shape culture and meaning. As such, the rich and diverse field of social network analysis has emerged as a central tool across the social sciences. This Handbook provides an overview of the theory, methods, and substantive contributions of this field. The thirty-three chapters move through the basics of social network analysis aimed at those seeking an introduction to advanced and novel approaches to modeling social networks statistically. The Handbook includes chapters on data collection and visualization, theoretical innovations, links between networks and computational social science, and how social network analysis has contributed substantively across numerous fields. As networks are everywhere in social life, the field is inherently interdisciplinary and this Handbook includes contributions from leading scholars in sociology, archaeology, economics, statistics, and information science among others"--

Rhythms of the Brain

Focusing on the problems that brains help organisms solve, *Neurobiology: A Functional Approach* asks not only how the nervous system works but also why it works as it does. This text introduces readers to neurobiology through an evolutionary, organismal, and experimental perspective. With a strong emphasis on neural circuits and systems, it bridges the gap between the cellular and molecular end and the cognitive end of the neuroscience spectrum, allowing students to grasp the full breadth of the subject. *Neurobiology* covers not only what neuroscientists have learned about the brain in terms of facts and ideas, but also how they have learned it through key experiments.

The Oxford Handbook of Identity Development

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his

or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Oxford Maths Practice and Mastery Book Year 1

Developmental and life-course criminology are both concerned with the study of changes in offending and problem behaviors over time. Developmental studies in criminology focus on psychological factors that influence the onset and persistence of criminal behavior, while life-course studies analyze how changes in social arrangements, like marriage, education or social networks, can lead to changes in offending. Though each perspective is clearly concerned with patterns of offending and problem behavior over time, the literature on each is spread across various disciplines, including criminology & criminal justice, psychology, and sociology. The *Oxford Handbook on Developmental and Life-Course Criminology* offers the first comprehensive survey of these two approaches together. Edited by three noted authorities in the field, the volume provides in-depth critical reviews of the development of offending, developmental and life-course theories, development correlates and risk/protective factors, life transitions and turning points, and effective developmental interventions from the world's leading scholars. In the first two sections, the contributors provide overviews of specific criminal career parameters, including age-crime curve, prevalence/frequency of offending, and co-offending, and review the

main theoretical frameworks in the developmental and life-course criminology areas. They further summarize some of the empirical literature on known developmental correlates and risk/protective factors associated with longitudinal patterns of offending in the next section. The fourth section focuses on life transitions and turning points as they may relate to persistence in-or desistance from-criminal activity into adulthood, while the final section examines the genesis of antisocial, delinquent, and criminal activity, its maintenance, and its cessation. A state of the art overview on the topic, this Handbook aims to be the most authoritative resource on all issues germane to developmental and life-course criminologists and provides next steps for further research.

One hundred stereotype maps glazed with the most exquisite human prejudice, especially collected for you by Yanko Tsvetkov, author of the viral Mapping Stereotypes project. Satire and cartography rarely come in a single package but in the Atlas of Prejudice they successfully blend in a work of art that is both funny and thought-provoking. The book is based on Mapping Stereotypes, Yanko Tsvetkov's critically acclaimed project that became a viral Internet sensation in 2009. A reliable weapon against bigots of all kinds, it serves as an inexhaustible source of much needed argumentation and-occasionally-as a nice slab of paper that can be used to smack them across the face whenever reasoning becomes utterly impossible. The Complete Collection version of the Atlas contains all maps from the previously published two volumes and adds twenty five new ones, wrapping the best-selling series in a single extended edition.

In financially constrained health systems across the world, increasing emphasis is being placed on the ability to demonstrate that health care interventions are not only effective, but also cost-effective. This book deals with decision modelling techniques that can be used to estimate the value for money of various interventions including medical devices, surgical procedures, diagnostic technologies, and pharmaceuticals. Particular emphasis is placed on the importance of the appropriate representation of uncertainty in the evaluative process and the implication this uncertainty has for decision making and the need for future research. This highly practical guide takes the reader through the key principles and approaches of modelling techniques. It begins with the basics of constructing different forms of the model, the population of the model with input parameter estimates, analysis of the results, and progression to the holistic view of models as a

valuable tool for informing future research exercises. Case studies and exercises are supported with online templates and solutions. This book will help analysts understand the contribution of decision-analytic modelling to the evaluation of health care programmes. ABOUT THE SERIES: Economic evaluation of health interventions is a growing specialist field, and this series of practical handbooks will tackle, in-depth, topics superficially addressed in more general health economics books. Each volume will include illustrative material, case histories and worked examples to encourage the reader to apply the methods discussed, with supporting material provided online. This series is aimed at health economists in academia, the pharmaceutical industry and the health sector, those on advanced health economics courses, and health researchers in associated fields.

A Life Course Approach to Women's Health

While some try to get out of prison, Soapy, the only character in O. Henry's short story, tries to get into it. Soapy is a homeless guy who prefers the warm cell to the cold night under the New York sky. He does everything he can think of in order to draw the attention of the police. However without any success. Until he hears a magical organ anthem. How will this story develop? Will Soapy manage to get into jail or he will find another way to sort out his life? "The Cop and the Anthem" is a comical short story with a touch of irony which emphatically presents the lower class and the obstacles man

has to face. William Sidney Porter (1862-1919), known simply as O. Henry, was a prolific American author of humorous literary pieces. His fame came exceptionally quickly and he became a bestselling author of short story collections, among the most famous being "Cabbages and Kings", "The Voice of the City", and "Strictly Business." As a result of the outstanding literature legacy that O. Henry left behind, there is an American annual award after his name, given to exceptional short stories.

Oxford Textbook of Clinical Nephrology

The human face is unique among social stimuli in conveying such a variety of different characteristics. A person's identity, sex, race, age, emotional state, focus of attention, facial speech patterns, and attractiveness are all detected and interpreted with relative ease from the face. Humans also display a surprising degree of consistency in the extent to which personality traits, such as trustworthiness and likeability, are attributed to faces. In the past thirty years, face perception has become an area of major interest within psychology, with a rapidly expanding research base. Yet until now, there has

been no comprehensive reference work bringing together this ever growing body of research. The Oxford Handbook of Face Perception is the most comprehensive and commanding review of the field ever published. It looks at the functional and neural mechanisms underlying the perception, representation, and interpretation of facial characteristics, such as identity, expression, eye gaze, attractiveness, personality, and race. It examines the development of these processes, their neural correlates in both human and non-human primates, congenital and acquired disorders resulting from their breakdown, and the theoretical and computational frameworks for their underlying mechanisms. With chapters by an international team of leading authorities from the brain sciences, the book is a landmark publication on face perception. For anyone looking for the definitive text on this burgeoning field, this is the essential book.

Identity is defined in many different ways in various disciplines in the social sciences and sub-disciplines within psychology. The developmental psychological approach to identity is characterized by a focus on developing a sense of the self that is temporally continuous and unified across the different life spaces that individuals inhabit. Erikson proposed that the task of adolescence and young adulthood was to define the self by answering the question: Who Am I? There have been many advances in theory and research on identity development since Erikson's writing over fifty years ago, and the time has come to consolidate our knowledge and set an agenda for future research. The Oxford Handbook of Identity Development represents a turning point in the field of identity development research. Various, and disparate, groups of researchers are brought together to debate, extend, and apply Erikson's theory to contemporary problems and empirical issues. The result is a comprehensive and state-of-the-art examination of identity development that pushes the field in provocative new directions. Scholars of identity development, adolescent and adult development, and related fields, as well as graduate

students, advanced undergraduates, and practitioners will find this to be an innovative, unique, and exciting look at identity development.
