In a world of growing interdependence, crimes are no longer confined by national boundaries. In this context, the necessity to understand criminological developments across the globe becomes imperative. This book aims to offer cross-cultural perspectives of different criminological issues and criminal justice systems operating worldwide. This book emphasizes the collective understanding of criminological problems from an international perspective. This book is a quintessence of contemporary criminological developments, with a global outlook. The book is an edited volume of articles collected from criminologists all over the world. It is a peer reviewed collection. The chapters focuses on various criminological issues such as Bullying, Child abuse, Corrections (Institutional and Community), Cyber crimes, Corporate crime, Corruption, Costs of crime, Crime Analysis, Crime prevention, Crime Mapping and GIS, Criminal justice systems, Environmental crime, Ethnic/communal/caste conflicts, Family violence, Fear of crime, High tech crimes, Homicide, Human trafficking, Juvenile Delinquency, Organized crime, Offenders including women offenders, Policing, Prisons, Public attitudes, Restorative justice, Sexual assault, Stalking, Theories of crime, Transnational crime, Victimology, Violence, White collar crime, and Workplace violence. The book aims to provide theoretical frameworks and pragmatic discussions on Criminology and Criminal Justice. It is intended for Academics, Criminal Justice professionals, and Graduate Students who want to improve their understanding of the issues and challenges that arise when issues related to criminology and criminal justice cross national boundaries. Also, practitioners and academics of allied fields like sociology, psychology, geography, political science, public administration and forensic sciences whose research interests include either crime/criminal justice system/Victim or crime analysis will find this book useful."The comprehensive framework of this book means that it provides a rich

variety of international perspectives on an array of crime and justice-related issues. The thirty chapters presented here are a treasure trove of insights in terms of both topical variety and approaches within topic. Dr. Jaishankar has assembled a valuable collection of readings that will find broad acceptance internationally." Prof. Keith Harries (From the Foreword)

DOES DISCOURSE HAVE A 'STRUCTURE'? HARRIS'S REVOLUTION IN LINGUISTICS As a freshman back in 1947 I discovered that within the various academic divisions and subdivisions of the University of Pennsylvania there existed a something (it was not a Department, but a piece of the Anthropology Department) called 'Linguistic Analysis'. I was an untalented but enthusiastic student of Greek and a slightly more talented student of German, as well as the son of a translator, so the idea of 'Linguistic Analysis' attracted me, sight unseen, and I signed up for a course. It turned out that 'Linguistic Analysis' was essentially a graduate program - I and another undergraduate called Noam Chomsky were the only two undergraduates who took courses in Linguistic Analysis - and also that it was essentially a one-man show: a professor named Zellig Harris taught all the courses with the aid of graduate Teaching Fellows (and possibly - I am not sure - one Assistant Professor). The technicalities of Linguistic Analysis were formidable, and I never did master them all. But the powerful intellect and personality of Zellig Harris drew me like a lodestone, and, although I majored in Philosophy, I took every course there was to take in Linguistic Analysis from then until my graduation. What 'Linguistics' was like before Zellig Harris is something not many people care to remember today.

### **The Syllogistic Philosophy Or Prolegomena to Science**

Following on from Roy Bhaskar's first two books, *A Realist Theory of Science* and *The Possibility of Naturalism*, *Scientific Realism and Human Emancipation*, establishes the conception of social science as explanatory—and thence emancipatory—critique. *Scientific Realism and Human Emancipation* starts from an assessment of the impasse of contemporary accounts of science as stemming from an incomplete critique of positivism. It then proceeds to a systematic exposition of scientific realism in the form of transcendental realism, highlighting a conception of science as explanatory of a structured, differentiated and changing world. Turning to the social domain, the book argues for a view of the social order as conditioned by, and emergent from, nature. Advocating a critical naturalism, the author shows how the transformational model of social activity together with the conception of social science as explanatory critique which it entails, resolves the divisions and dualisms besetting orthodox social and normative theory: between society and the individual, structure and agency, meaning and behavior, mind and body, reason and cause, fact and value, and theory and practice. The book then goes on to discuss the emancipatory implications of social science and sketches the nature of the depth investigation characteristically entailed. In the highly innovative third part of the book Roy Bhaskar completes his critique of positivism by developing a theory of philosophical discourse and ideology, on the basis of the transcendental realism and critical naturalism already developed, showing how positivism functions as a restrictive ideology of and for science and other social practices.

In Aristotle's teleological view of the world, natural things come to be and are present for the sake of some function or end (for example, wings are present in birds for the sake of flying). Whereas much of recent scholarship has focused on uncovering the (meta-)physical underpinnings of Aristotle's teleology and its contrasts with his notions of chance and necessity, this book examines Aristotle's use of the theory of natural teleology in producing explanations of natural phenomena. Close analyses of Aristotle's natural treatises and his Posterior Analytics show what methods are used for the discovery of functions or ends that figure in teleological explanations, how these explanations are structured, and how well they work in making sense of phenomena. The book will be valuable for all who are interested in Aristotle's natural science, his philosophy of science, and his biology.

## **Manual of Social Science**

Kosik writes that the history of a text is in a certain sense the history of its interpretations. In the fifteen years that have passed since the first (Czech) edition of his *Dialectics of the Concrete*, this book has been widely read and interpreted

throughout Europe, in diverse centers of scholarship as well as in private studies. A faithful English language edition is long overdue. This publication of Kosik's work will surely provoke a range of new interpretations. For its theme is the characterization of science and of rationality in the context of the social roots of science and the social critique which an appropriately rational science should afford. Kosik's question is: How shall Karl Marx's understanding of science itself be understood? And how can it be further developed? In his treatment of the question of scientific rationality, Kosik drives bluntly into the issues of gravest human concern, not the least of which is how to avoid the pseudo-concrete, the pseudo-scientific, the pseudo-rational, the pseudo historical. Starting with Marx's methodological approach, of "ascending from the abstract to the concrete", Kosik develops a critique of positivism, of phenomenalist empiricism, and of "metaphysical" rationalism, counter posing them to "dialectical rationalism". He takes the category of the concrete in the dialectical sense of that which comes to be known by the active transformation of nature and society by human purposive activity.
