## **A Handbook of Middle English Studies**

Pucker or Puckering is the most used (abused?) term in the garment manufacturing industry. Pick up any quality controllers report, and the first thing that will strike your eye will be "...Puckering in armhole, ...Puckering in neckline binding, ...control Puckering in bottom hem..." the list is endless. Buying office quality controllers are as enamoured of this term as much as manufacturers abhor it. What is it that makes it so distasteful? Why does it occur? How can it be controlled? While there are numerous leaflets, documents and articles available on pucker, we have found that the majority of them lay great stress on "inherent pucker" (only material parameters). In this booklet have tried to include process parameters as well as sewing of lightweight fabrics. All said and done, the problem is so intricately interdependent that exhaustive compilation is well nigh impossible. We are sure this booklet will help manufacturers to understand the rationale behind this publication and we will consider our effort successful if enthusiastic readers regularly inform us about newer methods to tackle the problem.

## **Greetings from Senility**

Through a detailed description of the life and activities of the middle-class married woman of London between 1875 and 1900, this study reveals how housewives unwittingly became engines for change as the new century neared. In marked contrast to the stereotypical depictions of Victorian women in literature and on television, Draznin reveals a woman seldom seen: the stay-at-home housewife whose activities were not much different than those of her counterparts today. By exploring her daily activities, how she cleaned her home, disciplined her children, managed her servants, stretched a limited budget, and began to indulge herself, one discovers the human dimension of women who lived more than a century ago. While most studies of this period consider values, aspirations, and attitudes, this book concentrates on actions, what these women did all day, to provide readers with a new perspective on Victorian life. Late-Victorian London was a surprisingly modern city with a public face of well-lit streets, an excellent underground railway system, and extended municipal services. In the home, gas stoves were replacing coal ranges and household appliances were becoming more common. Having both money to spend and a strong incentive to buy the new laborsaving devices, ready-to-wear clothing, and other manufactured products, the middle-class matron's resistance to change gave way to a rising consumer culture. Despite her nearly exclusive preoccupation with home and family, these urban women became agents for the modernization of Britain.

## **Serger Repair for the Home Sewer**

Do it yourself Serger machine repair!!! Sound like a far fetched idea? Not so, according to Reuben O. Doyle, a sewing machine repairman of 25 years and author of "Serger Repair for the Home Sewer." "In over 75% of the repair jobs I get, the home sewer/crafter could easily have handled the job if only they'd known what to look for. In about 25% of the repair jobs I go out on, the problem is such a minor one that anyone with a checklist of what to look for could fix it in seconds, but I have to charge them the same service fee as on any repair job. Of course any broken parts need to be taken to an authorized service repairman for repair or replacement, but those types of service calls are by far the minority!" Written in step by step instructional style, this book takes the serger machine owner through problem/solution scenarios allowing them to fix problems that can cause a lot of frustration for those who sew. Whether you have an older model machine, or one of the newer models, this book will help keep your general repair costs to a minimum. The home sewer can now just look up the problem in this handy guide book and follow the instructions on how to fix it. YES, it's now as easy to fix your serger machine as picking up a book!
