The Personality Puzzle

For every Skinny Bitch, there's a kick-ass man just as eager to take control of his weight and health. The New York Times bestselling authors now share their tips for turning Dad bods into Skinny Bastards. What's good for the bitch is good for the bastard. Hundreds

of thousands of women have been inspired to "use their head" and get real about the food they eat after reading the best-selling manifesto *Skinny Bitch*. But it turns out some men have been reading over their girlfriends' shoulders. Professional athletes such as Milwaukee Brewers' Prince Fielder and the Dallas Mavericks' Jerry Stackhouse have adopted a whole new eating plan because of the book. Now authors Rory Freedman and Kim Barnouin think it's time for the guys to have a book of their own. In *Skinny Bastard*, they'll explain why the macho "meat and potatoes" diet is total crap, why having a gut is uncool (and a turn-off), and how to get buff on the right foods. Eating well shouldn't be a "girlie" thing—and the Bitches will whip any man into shape with their straight-talk, sound guidance, and locker room language.

One Big Soul: An Oral History of Terrence Malick

The story begins, as stories do in all good thrillers, with a botched robbery and a police chase. Eight Apuleian vases of the fourth century B.C. are discovered in the swimming pool of a German-based art smuggler. More valuable than the recovery of the vases, however, is the discovery of the smuggler's card index detailing his deals and dealers. It reveals the existence of a web of tombaroli—tomb raiders—who steal classical artifacts, and a network of dealers and smugglers who spirit them out of Italy and into the hands of wealthy collectors and museums. Peter Watson, a former investigative journalist for the

London Sunday Times and author of two previous exposés of art world scandals, names the key figures in this network that has depleted Europe's classical artifacts. Among the loot are the irreplaceable and highly collectable vases of Euphronius, the equivalent in their field of the sculpture of Bernini or the painting of Michelangelo. The narrative leads to the doors of some major institutions: Sothebys, the Getty Museum in L.A., the Museum of Fine Arts in Boston, and the Metropolitan Museum of Art in New York among them. Filled with great characters and human drama, *The Medici Conspiracy* authoritatively exposes another shameful round in one of the oldest games in the world: theft, smuggling and duplicitous dealing, all in the name of art.

Club' deftly brings the most up-to-date research about other minds to readers of all backgrounds. It may cause you to think differently about crime and punishment, about business transactions and health care, and even about the upcoming elections. Things might just start looking up."—The Wall Street Journal

From dogs to gods, the science of understanding mysterious minds—including your own. Nothing seems more real than the minds of other people. When you consider what your boss is thinking or whether your spouse is happy, you are admitting them into the "mind club." It's easy to assume other humans can think and feel, but what about a cow, a computer, a corporation? What kinds of mind do they have? Daniel M. Wegner and Kurt Gray are award-winning psychologists who have discovered that minds—while incredibly important—are a matter of perception. Their research opens a trove of new findings, with insights into human behavior that are fascinating, frightening and funny. The Mind Club explains why we love some animals and eat others, why people debate the existence of God so intensely, how good people can be so cruel, and why robots make such poor lovers. By investigating the mind perception of extraordinary targets—animals, machines, comatose people, god—Wegner and Gray explain what it means to have a mind, and why it matters so much. Fusing cutting-edge research and personal anecdotes, The Mind Club explores the moral dimensions of mind perception with wit and compassion, revealing the surprisingly simple basis for what compels us to love and hate, to harm and to protect. You Are What You Wear

"A provocative look at how our private spaces--from boardroom to bedroom--reveal our personalities. For ten years psychologist Sam Gosling has been studying how people project (and protect) their inner selves. By exploring our private worlds (desks, bedrooms, even our clothes and our cars), he shows not only how we showcase our personalities in unexpected--and unplanned--ways, but also how we create personality in the first place, communicate it others, and interpret the world around us. When it comes to the most essential components of our personalities--from friendliness to flexibility--the things we own and the way we arrange them often say more about us than even our most intimate conversations. If you know what to look for, you can figure out how reliable a new boyfriend is by peeking into his medicine cabinet, or whether an employee is committed to her job by analyzing her cubicle"--From publisher description.

The Redemptive Self

A clear-eyed account of learning how to lead in a chaotic world, by General Jim Mattis--the former Secretary of Defense and one of the most formidable strategic thinkers of our time--and Bing West, a former assistant secretary of defense and combat Marine. *Call Sign Chaos* is the account of Jim Mattis's storied career, from wide-ranging leadership roles in three wars to ultimately commanding a quarter of a million troops across the Middle East. Along the way, Mattis recounts his foundational experiences as a

leader, extracting the lessons he has learned about the nature of warfighting and peacemaking, the importance of allies, and the strategic dilemmas--and short-sighted thinking--now facing our nation. He makes it clear why America must return to a strategic footing so as not to continue winning battles but fighting inconclusive wars. Mattis divides his book into three parts: direct leadership, executive leadership, and strategic leadership. In the first part, Mattis recalls his early experiences leading Marines into battle, when he knew his troops as well as his own brothers. In the second part, he explores what it means to command thousands of troops and how to adapt your leadership style to ensure your intent is understood by your most junior troops so that they can own their mission. In the third part, Mattis describes the challenges and techniques of leadership at the strategic level, where military leaders reconcile war's grim realities with political leaders' human aspirations, where complexity reigns and the consequences of imprudence are severe, even catastrophic. Call Sign Chaos is a memoir of lifelong learning, following along as Mattis rises from Marine recruit to four-star general. It is a journey learning to lead and a story about how he, through constant study and action, developed a unique leadership philosophy--one relevant to us all.

Don't Think Pink

Who are you? It's the most fundamental of human questions. Are you the type of person who tilts at windmills, or the one who prefers to view them from

the comfort of an air-conditioned motorcoach? Our personalities are endlessly fascinating—not just to ourselves but also to our spouses, our parents, our children, our co-workers, our neighbors. As a highly social species, humans have to navigate among an astonishing variety of personalities. But how did all these different permutations come about? And what purpose do they serve? With her trademark wit and sly humor, Hannah Holmes takes readers into the amazing world of personality and modern brain science. Using the Five Factor Model, which slices temperaments into the major factors (Extraversion, Neuroticism, Agreeableness, Conscientiousness, and Openness) and minor facets (such as impulsive, artistic, or cautious), Holmes demonstrates how our genes and brains dictate which factors and facets each of us displays. Are you a Nervous Nelly? Your amygdala is probably calling the shots. Hyperactive Hal? It's all about the dopamine. Each facet took root deep in the evolution of life on Earth, with Nature allowing enough personal variation to see a species through good times and bad. Just as there are introverted and extroverted people, there are introverted and extroverted mice, and even starfish. In fact, the personality genes we share with mice make them invaluable models for the study of disorders like depression, schizophrenia, and anxiety. Thus it is deep and ancient biases that guide your dealings with a very modern world. Your personality helps to determine the political party you support, the car you drive, the way you eat M&Ms, and the likelihood that you'll cheat on your spouse. Drawing on data from top research laboratories, the lives of her eccentric friends, the conflicts that plague her

own household, and even the habits of her two pet mice, Hannah Holmes summarizes the factors that shape you. And what she proves is that it does take all kinds. Even the most irksome and trying personality you've ever encountered contributes to the diversity of our species. And diversity is the key to our survival.

From Crook to Cook

Every day we make predictions based on limited information, in business and at home. Will this company's stock performance continue? Will the job candidate I just interviewed be a good employee? What kind of adult will my child grow up to be? We tend to dismiss our predictive minds as prone to bias and mistakes, but in *The Tell*, psychologist Matthew Hertenstein reveals that our intuition is surprisingly good at using small clues to make big predictions, and shows how we can make better decisions by homing in on the right details. Just as expert poker players use their opponents' tells to see through their bluffs, Hertenstein shows that we can likewise train ourselves to read physical cues to significantly increase our predictive acumen. By looking for certain clues, we can accurately call everything from election results to the likelihood of marital success, IQ scores to sexual orientation—even from flimsy evidence, such as an old yearbook photo or a silent one-minute video. Moreover, by understanding how people read our body language, we can adjust our own behavior so as to ace our next job interview or tip the dating scales in our favor. Drawing on rigorous research in

psychology and brain science, Hertenstein shows us how to hone our powers of observation to increase our predictive capacities. A charming testament to the power of the human mind, *The Tell* will, to paraphrase Sherlock Holmes, show us how to notice what we see.

Reviewers exhaust superlatives when it comes to the science fiction of Peter F. Hamilton. His complex and engaging novels, which span thousands of years—and light-years—are as intellectually stimulating as they are emotionally fulfilling. Now, with *The Dreaming Void*, the first volume in a trilogy set in the same far-future as his acclaimed Commonwealth saga, Hamilton has created his most ambitious and gripping space epic yet. The year is 3589, fifteen hundred years after Commonwealth forces barely staved off human extinction in a war against the alien Prime. Now an even greater danger has surfaced: a threat to the existence of the universe itself. At the very heart of the galaxy is the Void, a self-contained microuniverse that cannot be breached, cannot be destroyed, and cannot be stopped as it steadily expands in all directions, consuming everything in its path: planets, stars, civilizations. The Void has existed for untold millions of years. Even the oldest and most technologically advanced of the galaxy's sentient races, the Rael, do not know its origin, its makers, or its purpose. But then Inigo, an astrophysicist studying the Void, begins dreaming of human beings who live

within it. Inigo's dreams reveal a world in which thoughts become actions and dreams become reality. Inside the Void, Inigo sees paradise. Thanks to the gaiafield, a neural entanglement wired into most humans, Inigo's dreams are shared by hundreds of millions—and a religion, the Living Dream, is born, with Inigo as its prophet. But then he vanishes. Suddenly there is a new wave of dreams. Dreams broadcast by an unknown Second Dreamer serve as the inspiration for a massive Pilgrimage into the Void. But there is a chance that by attempting to enter the Void, the pilgrims will trigger a catastrophic expansion, an accelerated devourment phase that will swallow up thousands of worlds. And thus begins a desperate race to find Inigo and the mysterious Second Dreamer. Some seek to prevent the Pilgrimage; others to speed its progress—while within the Void, a supreme entity has turned its gaze, for the first time, outward. . . . Does putting your smartphone on the dinner table impact your relationships? How does where you place your TV in your home affect your family? The Stuff of Family Life takes readers inside the changing world of families through a unique examination of their stuff. From digital family photo albums to the growing popularity of “man caves,” author Michelle Janning looks at not only what large demographic studies say about family dynamics but also what our lives—and the stuff in them—say about how we relate to each other. The book takes readers through various phases of family life, including dating, marriage, parenting, divorce, and aging, while paying attention to how our choices about our spaces and objects impact our lives. Janning has joked, “I'm not a social scientist who uses large national datasets to illustrate family life; I'm the social scientist who asks people to examine what's in their underwear drawers to tell stories about their family life.” From underwear drawers to calendars, The Stuff of Family Life offers an illuminating and entertaining look at the complexities of American families today.

George W. Bush remains a highly controversial figure, a man for whom millions of Americans have very strong feelings. Dan McAdams' book offers an astute psychological portrait of Bush, one of the first biographies to appear since he left office as well as the first to draw systematically from personality science to analyze his life. McAdams, an international leader in personality psychology and the narrative study of lives, focuses on several key events in Bush's life, such as the death of his sister at age 7, his commitment to sobriety on his 40th birthday, and his reaction to the terrorist attacks of September 11, and his decision to invade Iraq. He sheds light on Bush's life goals, the story he constructed to make sense of his life, and the psychological dynamics that account for his behavior. Although there are many popular biographies of George W. Bush, McAdams' is the first true psychological analysis based on established theories and the latest research. Short and focused, written in an engaging style, this book offers a truly penetrating look at our forty-third president.

informs on a dozen crazy, nasty animals of the wild kingdom employing his unique style of telling it like it is! His wildlife writing is refreshingly honest. If an animal scares Randall, he's not afraid to share. Unlike most nature writers, Randall doesn't deliver the sugarcoated or drab description. He "goes there" and shares his true feelings with his audience. Because of this, his readers feel that they can relate. Randall loves animals—even the ones that terrify him. He may not agree with how these animals conduct themselves in the world, but Randall wants everyone to know who they are. Just as he introduced the world to the honey badger, the Jesus lizard, and others, so will Randall shed light on twelve bizarre and interesting animals. The Mind Club

In April 1992 a young man from a well-to-do family hitchhiked to Alaska and walked alone into the wilderness north of Mt. McKinley. His name was Christopher Johnson McCandless. He had given \$25,000 in savings to charity, abandoned his car and most of his possessions, burned all the cash in his wallet, and invented a new life for himself. Four months later, his decomposed body was found by a moose hunter. How McCandless came to die is the unforgettable story of *Into the Wild*. Immediately after graduating from college in 1991, McCandless had

roamed through the West and Southwest on a vision quest like those made by his heroes Jack London and John Muir. In the Mojave Desert he abandoned his car, stripped it of its license plates, and burned all of his cash. He would give himself a new name, Alexander Supertramp, and, unencumbered by money and belongings, he would be free to wallow in the raw, unfiltered experiences that nature presented. Craving a blank spot on the map, McCandless simply threw the maps away. Leaving behind his desperate parents and sister, he vanished into the wild. Jon Krakauer constructs a clarifying prism through which he reassembles the disquieting facts of McCandless's short life. Admitting an interest that borders on obsession, he searches for the clues to the dries and desires that propelled McCandless. Digging deeply, he takes an inherently compelling mystery and unravels the larger riddles it holds: the profound pull of the American wilderness on our imagination; the allure of high-risk activities to young men of a certain cast of mind; the complex, charged bond between fathers and sons. When McCandless's innocent mistakes turn out to be irreversible and fatal, he becomes the stuff of tabloid headlines and is dismissed for his naiveté, pretensions, and hubris. He is said to have had a death wish but wanting to die is a very different thing from being compelled to look over the edge. Krakauer brings McCandless's uncompromising pilgrimage out of the shadows, and the peril, adversity, and renunciation sought by this enigmatic young man are illuminated with a rare understanding--and not an ounce of sentimentality. Mesmerizing, heartbreaking, *Into the Wild* is a tour de force. The power and luminosity of Jon Krakauer's stoytelling blaze through

meaningful friendships are the solution? Journalist Kate Leaver believes that friendship is the essential cure for the modern malaise of solitude, ill health, and anxiety and that, if we only treated camaraderie as a social priority, it could affect everything from our physical health and emotional well being. Why do some friendships last a lifetime, while others are only temporary? How do you “break up†? with a toxic friend? How do you make friends as an adult? Can men and women really be platonic? What are the curative qualities of friendship, and how we can deploy friendship to actually live longer, better lives?
