Lesson study is a popular professional development approach in Japan whereby teachers collaborate to study content, instruction, and how students solve problems and reach for understanding in order to improve elementary mathematics instruction and learning in the classroom. This book is the first comprehensive look at the system and process of lesson study in Japan. It describes in detail the process of how teachers conducted lesson study--how they collaborated in order to develop a lesson, what they talked about during the process, and what they looked at in order to understand deeply how students were learning. Readers see the planning of a mathematics lesson, as well as how much content knowledge the

teachers have. They observe students' problem solving strategies and learn how Japanese teachers prepare themselves to identify those strategies and facilitate the students' discussion. How to Teach Reading

The business world swarms with alpha males—powerhouses who take charge, produce astonishing results, and bring enormous value to their organizations. But many alphas also leave a path of destruction in their wake. Competitive, belligerent, and impatient, these hard-charging leaders can run roughshod over colleagues and employees, to the detriment of their careers and the bottom line. In Alpha Male Syndrome, Kate Ludeman and Eddie Erlandson build on their Harvard Business Review article “Coaching the Alpha Male”—sounding a wake-up call to all alphas and the companies they work for. The authors show alphas how to leverage their unique strengths while confronting their destructive “flip side risks.” They describe the distinguishing dynamics of the alpha male syndrome and identify four breeds: commanders, executors, strategists, and visionaries. By understanding each type’s nuances, alphas can transform themselves into more effective leaders. And those who work with alphas can transform nightmare work groups into collaborative dream teams. Exercises, checklists, and tips enable readers to harness the enormous power of the alpha personality while minimizing the downsides of alpha behavior.

Forty Studies that Changed Psychology

The field of psychological assessment has been undergoing rapid change. The second edition of this Handbook, published in 1990, appeared at the beginning of a decade marked by extensive advances in assessment in essentially all of its specialized areas. There are many new tests, new applications of established tests, and new test systems. Major revisions have appeared of established tests, notably the Wechsler intelligence scales. The time seemed right for a third edition, since even over the relatively brief period of ten years, many tests described in the second edition have been replaced, and are no longer commonly used. Furthermore, much new research in such areas as neuropsychology, cognitive science, and psychopathology have made major impacts on how many tests and other assessment procedures are used and interpreted. This third edition represents an effort to give the reader an overview of the many new developments in assessment, while still maintaining material on basic psychometric concepts in order for it to continue to serve as a comprehensive handbook for the student and professional.

Emotions of Normal People

Written by James R. Flynn of the "Flynn effect" (the sustained and substantial increase in intelligence test scores across the world over many decades), *Intelligence and Human Progress* examines genes and human achievement in all aspects, including what genes allow and forbid in terms of personal life history, the cognitive progress of humanity, the moral progress of humanity, and the cross-fertilization of the two. This book presents a new method for weighing family influences versus genes in the cognitive abilities of individuals, and counters the arguments of those who dismiss gains in IQ as true cognitive gains. It ranges over topics including: how family can handicap those taking the SAT; new IQ thresholds for occupations that show elite occupations are within reach of the average American; what Pol Pot did to the genetic potential of Cambodia; why dysgenics (the deterioration of human genes over the generations) is important, but no menace for the foreseeable future; and what might derail human intellectual progress. Researchers in developmental and cognitive psychology, educators, and professionals involved in intelligence testing or psychometrics will benefit from the perspectives offered here. But beyond that, anyone interested in the potential of the human mind will be engaged and challenged by one of the most important contemporary thinkers on the subject.

ASESMEN TEKNIK TES DAN NON TES

The true-life adventure of a Western woman who found happiness in Bali, then stayed on in Indonesia to help in the struggle for freedom. The great-granddaughter of a witch from the Isle of Man, the adopted daughter of a Balinese rajah, hostess of one of the most glamorous hotels in the Far East, a prisoner of the Japanese for two horror-packed years and, as Surabaya Sue, an ardent supporter of the Indonesian revolution, K'tut Tantri is well acquainted with the unexpected. Adventure and courage run strong in her blood. It was in a Hollywood movie theater that she first discovered Bali and knew it for the place where she belonged. She had hoped to live and paint there quietly among the island's simple people, but destiny, in the form of a stalled car and a delightful young prince, took a hand and revised her plans. She was formally adopted by the prince's father, and though she came to know the peasants of the Balinese kampongs, she knew also, and intimately, the life of a Balinese palace with all its ritual and tradition. This world lasted for only a few years. With war come the Japanese, presumably as deliverers overthrowing Dutch rule but in reality as tyrants. K'tut Tantri stayed on to join the underground movement agitating for Indonesian independence, and was eventually captured, imprisoned, tortured. Then with the end of hostilities she chose once again to ally herself with the Indonesians—this time in their resistance against the British and the returning Dutch. A friend of the leaders around Sukarno, she was instrumental in getting the Indonesian story to the outside world, and on several occasions she lent herself to enterprises requiring the combined talents of Mata Hari and T E. Lawrence. K'tut Tantri has an observant eye, an understanding knowledge, and she writes with spirit. Her story is a deeply moving personal drama and a vivid commentary on a period of crucial change in an ancient, romantic country.
