Five new plays. *Elegy* (by Jodi Gallagher): Two sisters, unlike, yet sharing a lust for life. When one dies, the other finds herself in a void that can only be created by the loss of a loved one. A tender but frank account of a family tragedy. *So Wet* (by Samantha Bews): Silv, a twenty-something, is a professional woman on the move and determined to make every post a winner -- and that's just her social life. A witty tale of longing, laced with a touch of the erotic. *Like a Metaphor* (by Gabrielle MacDonald): A language journey, in four and a half monologues, through a series of refractions, turning points and tiny visceral moments. A woman's sensual examination of bodily experiences. *Baby X* (by Campion Decent): Georgie and Evelyn are a lesbian couple in search of a sperm donor. A madcap comedy that takes a recipe for family life, throws it in a blender with a generous dollop of queer consciousness, and celebrates the result. *Violet Inc.* (by Pam Leversha): Violet Fahrenheit: brilliant, savage, inspiring -- her spirit radiates the lovers and acolytes who surround her. Thirty years later, they are still struggling to exorcise her legacy. A vibrant journey through social and personal change.

Finally, a rebuild and performance guide for GM 6.2 and 6.5L diesel engines! In the late 1970s and early 1980s, there was considerable pressure on the Detroit automakers to increase the fuel efficiency for their automotive and light-truck lines. While efficient electronic engine controls and computer-controlled gas engine technology was still in the developmental stages, the efficiency of diesel engines was already well documented during this time period. As a result, General Motors added diesel engine options to its car and truck lines in an attempt to combat high gas prices and increase fuel efficiency. The first mass-produced V-8 diesel engines of the era, the 5.7L variants, appeared in several General Motors passenger-car models beginning in 1978 and are often referred to as the Oldsmobile Diesels because of the number of Oldsmobile cars equipped with this option. This edition faded from popularity in the early 1980s as a result of falling gas prices and quality issues with diesel fuel suppliers, giving the cars a bad reputation for dependability and reliability. The 6.2L appeared in 1982 and the 6.5L in 1992, as the focus for diesel applications shifted from cars to light trucks. These engines served faithfully and remained in production until 2001, when the new Duramax design replaced it in all but a few military applications. While very durable and reliable, most of these engines have a lot of miles on them, and many are in need of a rebuild. This book will take you through the entire rebuild process step by step from diagnosis to tear down, inspection to

parts sourcing, machining, and finally reassembly. Also included is valuable troubleshooting information, detailed explanations of how systems work, and even a complete Stanadyne DB2 rebuild section to get the most out of your engine in the modern era. If you have a 6.2, or 6.5L GM diesel engine, this book is a must-have item for your shop or library.

A politically polarized America is coming together over a new kind of car—the plug-in hybrid that will save drivers money, reduce pollution, and increase US security by reducing dependence on imported oil. Plug-in Hybrids points out that, where hydrogen fuel-cell cars won't be ready for decades, the technology for plug-in hybrids exists today. Unlike conventional hybrid cars that can't run without gasoline, plug-in hybrids use gasoline or cheaper, cleaner, domestic electricity—or both. Although plug-in hybrids are not yet for sale, demand for them is widespread, coming from characters across the political spectrum, such as:

- Chelsea Sexton, the automotive insider: working for General Motors, Sexton fought attempts to destroy the all-electric EV1 car and describes how car companies are resisting plug-in hybrids—and why they'll make them -anyway.
- Felix Kramer and the tech squad: Kramer started a nonprofit organization using the Internet to tap into a small army of engineers who built the first plug-in Prius hybrids.
- R. James Woolsey, former CIA director and national security hawk: seeing the end of oil supplies looming, Woolsey is demanding plug-in hybrids to wean us from petroleum. Cautioning that the oil and auto companies know how to undermine the success of plug-in car programs to protect their interests, the book gives readers tools to ensure that plug-in hybrids get to market—and stay here.
